

BUSINESS PROCESS MAPPING (BPM) -- SAMPLE DOCUMENT

Version: Draft v1.0 | Prepared by iSERD | BPM Discovery Sessions: 4-5 March 2026

Use this as your benchmark reference -- fill in the blank template with actual Greenwood answers

Sample BPM Modules Included in This Document

Module 01 -- Employees (HR)
Module 02 -- Attendance (HR)
Module 03 -- Time Off / Leave (HR)
Module 07 -- Purchase (Procurement)
Module 08 -- Inventory (Warehouse & Operations)
Module 09 -- Sales (Sales & Customer Service)
Module 10 -- Accounting (Finance)

Note: Modules 04 (Payroll), 05 (Expenses), 06 (Appraisal), 11 (Assets), 12 (Project), 13 (Documents) follow the same structure -- use the blank template for those.

1. CONTACT INFORMATION

Contact Person(s)	HR Manager / HR Officer - Greenwood Supply Services
Process Name	Employee Record Management & Organisational Structure
Session Date	Wednesday 4 March 2026 (Day 2)
Conducted By	iSERD Business Analyst / Consultant

2. PLAYERS / ROLES

Role / Job Title	Responsibility	Odoo 19 User Role
HR Manager	Oversees all HR processes, approves hirings and terminations, sets HR policy	HR Manager (Odoo)
HR Officer	Creates and maintains employee records, manages documentation	HR Officer (Odoo)
Department Manager	Requests new hires, confirms job titles, acts as line manager	Employee (Odoo) with Manager rights
Employee	Subject of the record, provides personal details	Employee (Odoo) -- self-service portal

3. CURRENT-STATE PROCESS (How they do it today)

Current System / Tool	Physical files, Excel spreadsheet, email
Process Description	Employee records are kept in a combination of physical HR files (contracts, ID copies, certificates) and an Excel spreadsheet. When a new employee joins, HR manually creates a row in the spreadsheet with basic details: name, job title, department, start date, and salary. Org chart is maintained as a PowerPoint slide and updated manually when changes occur. Employee documents (contracts, IDs) are stored in physical folders organised by department. When an employee leaves, their records are archived manually and salary is calculated for final pay.
Pain Points / Challenges	- No single source of truth -- employee data exists in multiple places (Excel, physical files, payroll records) - No automated alerts when contracts are about to expire - Difficult to see the full org chart at a glance

- No self-service -- employees cannot update their own info or check leave balances
- Manager/department links are informal -- not tracked systematically

4. ACTIVITIES

#	Activity
1	Create new employee record on joining
2	Upload employment contract and ID documents
3	Set department, job position, and direct manager
4	Assign work schedule and work location
5	Add private information: bank account (for payroll), emergency contact, next of kin
6	Update records when details change (promotion, transfer, address change)
7	Initiate offboarding when employee leaves: archive record, trigger final payroll

5. STEPS (Detailed Process Flow)

#	Step
1	HR Officer receives onboarding pack from employee (filled form, ID, signed contract)
2	HR Officer creates new employee in Odoo: Employees > New -- enters Name, Job Position, Department, Manager, Work Location, Work Email
3	HR Officer uploads contract under the employee's Documents smart button
4	HR Officer fills in the Private Information tab: ID number, date of birth, gender, nationality, address, emergency contact, marital status
5	HR Officer fills in HR Settings tab: Timezone (Africa/Accra), Leave Manager, Expense Manager, Coach/Mentor
6	HR Officer adds bank account details (for payroll payment) under Save > Private Info > Save & Close
7	HR Officer creates the employee's employment contract: Employee > Contracts tab > New Contract -- enter wage, allowances, contract type, start date
8	HR Manager reviews and confirms the contract (status changes to Running)
9	New employee record is live -- payroll, attendance, leave, expenses are all now linked

6. BUSINESS RULES

R	Business Rule
R1	Every employee must have exactly ONE active (Running) contract at any given time. Multiple active contracts for one employee is not allowed.
R2	An employee cannot be added to payroll without a confirmed running contract.
R3	Contract type defines leave entitlement -- Permanent employees get full annual leave; Fixed-term employees on probation have limited leave.
R4	HR Manager must approve all new hires and terminations -- HR Officer cannot action these without manager approval.
R5	Employee bank account details must be entered before the first payroll run -- otherwise payroll cannot be disbursed.

7. PROPOSED ODOO 19 WORKFLOW

Odoo Module	Employees (hr)
Navigation Path	Home > Employees > Employees > New
Proposed Workflow	1. HR Officer navigates to Employees > Employees > New 2. Fills in General Information tab: Name, Job Position, Department, Manager, Coach, Work Location, Work Phone, Work Email 3. Fills in Work Information tab: Work Location, Timezone, Work Schedule (links to attendance) 4. Fills in Private Information tab: ID, Date of Birth, Gender, Address, Emergency Contact, Bank Account 5. Fills in HR Settings tab: Leave Manager, Expense Manager, Odoo Portal access if needed 6. Uploads Documents: contract, ID copy, certificates via the Documents smart button 7. Creates contract: Contracts tab > New > sets Contract Type, Wage, Start Date, Allowances 8. HR Manager reviews and clicks Confirm on the contract 9. System automatically links employee to Attendance, Time Off, Payroll, and Expenses

8. GAP ANALYSIS

Gap Identified	Impact	Resolution
No existing digital org chart	Greenwood has no structured org chart -- departments and reporting lines are informal	Map all departments and reporting lines in Odoo. Use Employees > Departments to build the hierarchy. Generate org chart view from Employees module.
Physical documents only	Contracts and IDs are only in physical files -- not digitally stored	Upload all existing employee documents to Odoo Documents module linked to each employee profile during master data loading.

9. DATA REQUIREMENTS

Data Item	Description / Source	Status
Employee Master List	Full list of all current employees: name, ID, job title, department, start date, contact	Pending -- template sent to Greenwood
Employment Contracts	Scanned copies of all employment contracts	Pending -- Greenwood to provide
Department & Job Position List	Official list of all departments and job titles	Pending -- to confirm with HR Manager
Bank Account Details	Employee bank account numbers for payroll disbursement	Pending -- sensitive data -- confirm handling process
Work Schedules	Standard working hours, shift patterns if any	Pending -- to confirm with HR

10. OPEN ITEMS / ASSUMPTIONS

Open Items	- Confirm: Does Greenwood have a formal job grading system (Grade 1, 2, 3...)? If yes, map grades to salary structures. - Confirm: Are there any foreign nationals / work permit holders whose permit expiry needs tracking? - Assumption: All employees work from one of two locations (Ghana or Namibia). Confirm no remote-only staff.
------------	---

11. SIGN-OFF

By signing below, Greenwood Supply Services confirms that the process documented above is accurate and approved for Odoo 19 configuration.

Name	Title / Role	Signature & Date
Greenwood Contact	Department Head / Process Owner	Date: _____
iSERD Consultant	Business Analyst	Date: _____
iSERD PM	Project Manager	Date: _____

1. CONTACT INFORMATION

Contact Person(s)	HR Manager, Warehouse Supervisor
Process Name	Employee Attendance Tracking
Session Date	Wednesday 4 March 2026 (Day 2)
Conducted By	iSERD Business Analyst / Consultant

2. PLAYERS / ROLES

Role / Job Title	Responsibility	Odoo 19 User Role
Employee	Checks in and out daily, requests overtime approval	Employee (Odoo) -- self check-in via app or kiosk
HR Officer	Reviews attendance reports, investigates anomalies	HR Officer (Odoo)
HR Manager	Approves overtime, validates attendance for payroll	HR Manager (Odoo)
Warehouse Supervisor	Manages warehouse shift attendance	Employee with limited manager rights

3. CURRENT-STATE PROCESS (How they do it today)

Current System / Tool	Paper attendance register (sign-in book at front desk and warehouse)
Process Description	Employees sign a physical paper register when they arrive and leave. Warehouse staff have a separate register from office staff. HR manually tallies weekly attendance from the register at the end of each week. Overtime is tracked verbally -- employees tell their manager, manager tells HR. There is no biometric device currently in place.
Pain Points / Challenges	- Manual tallying of paper registers is time-consuming and error-prone - No real-time visibility of who is in the building - Overtime disputes occur frequently as there is no formal record - Payroll uses attendance data that may be inaccurate due to manual process

4. ACTIVITIES

#	Activity
1	Employees check in at start of work
2	Employees check out at end of work
3	HR reviews attendance daily/weekly
4	Overtime is flagged and approved
5	Attendance data feeds into monthly payroll computation

5. STEPS (Detailed Process Flow)

#	Step
1	Employee arrives at work and opens the Odoo Kiosk (tablet at entrance) or logs into the Odoo app on their phone
2	Employee taps 'Check In' -- system records timestamp and employee name
3	At end of shift, employee taps 'Check Out' -- system records departure time
4	Odoo auto-calculates hours worked per day
5	If overtime worked: employee submits an overtime note via Attendances > Extra Hours
6	HR Manager reviews and approves extra hours in Odoo
7	At month-end, HR Officer runs the Attendance report and reviews for anomalies
8	Attendance data automatically feeds into payroll computation for the period

6. BUSINESS RULES

R	Business Rule
R1	Standard working hours are 08:00 to 17:00, Monday to Friday (1 hour lunch, 8 productive hours). Any hours beyond 17:00 are potential overtime.
R2	Overtime must be pre-approved by the department manager OR approved retrospectively within 24 hours of the extra hours worked.
R3	Attendance is required at least 22 working days per month for a full salary payment. Absences without leave approval reduce salary pro-rata.
R4	If an employee does not check out, HR must manually correct the record and note the reason. Uncorrected records are flagged in payroll.

7. PROPOSED ODOO 19 WORKFLOW

Odoo Module	Attendances (hr_attendance)
-------------	-----------------------------

Navigation Path	Home > Attendances > Attendances (or via Kiosk mode on tablet)
Proposed Workflow	10. A tablet/kiosk is set up at the Greenwood entrance running Odoo Kiosk mode 11. Each employee has a PIN or badge scan to identify themselves 12. Employee taps Check In on arrival -- Odoo records timestamp 13. Employee taps Check Out on departure -- Odoo calculates duration 14. HR Manager monitors Attendances > Overview to see real-time who is in 15. At month end: Attendances > Reporting > Attendance Analysis report is generated 16. Payroll uses the work entries generated from attendance to compute each employee's working days

8. GAP ANALYSIS

Gap Identified	Impact	Resolution
No biometric device currently	Manual sign-in book is the current method	Implement Odoo Kiosk mode on a shared tablet as a cost-effective first step. Biometric IoT integration can be a Phase 2 upgrade if budget allows.
No formal overtime approval process	Overtime is tracked verbally	Implement the Extra Hours feature in Odoo. Employees log extra hours, manager approves in Odoo. Creates a formal paper trail.

9. DATA REQUIREMENTS

Data Item	Description / Source	Status
Work Schedules	Standard hours per day and any shift patterns	Pending -- confirm with HR Manager
Employee List	All employees to be registered in attendance system	Linked to Employee module data
Overtime Policy	Exact rules for overtime rate and approval	Pending -- confirm rate: 1.5x or 2x?
Public Holiday Calendar	Ghana and Namibia 2026 public holidays	Pending -- will configure in Odoo

10. OPEN ITEMS / ASSUMPTIONS

Open Items	• Confirm: Will Greenwood invest in a biometric device (fingerprint reader)? If yes, IoT Box setup is needed. If no, Kiosk mode on tablet is the alternative. • Confirm: Exact overtime rate -- is it 1.5x basic? 1.5x gross? Does it differ by role? • Assumption: All office staff work 8:00--17:00. Warehouse staff may have different hours -- confirm shift times.
-------------------	---

11. SIGN-OFF

By signing below, Greenwood Supply Services confirms that the process documented above is accurate and approved for Odoo 19 configuration.

Name	Title / Role	Signature & Date
Greenwood Contact	Department Head / Process Owner	Date: _____
iSERD Consultant	Business Analyst	Date: _____
iSERD PM	Project Manager	Date: _____

1. CONTACT INFORMATION

Contact Person(s)	HR Manager, HR Officer
Process Name	Leave Request, Approval, and Balance Management
Session Date	Wednesday 4 March 2026 (Day 2)
Conducted By	iSERD Business Analyst / Consultant

2. PLAYERS / ROLES

Role / Job Title	Responsibility	Odoo 19 User Role
Employee	Submits leave request, views own leave balance	Employee (Odoo) -- self-service portal
Department Manager	First approver of leave requests for their team	Leave Approver (set on employee record)
HR Officer	Second approver for leave > 5 days, manages leave allocations	Time Off Officer (Odoo)
HR Manager	Sets leave policies, handles exceptional cases	Time Off Administrator (Odoo)

3. CURRENT-STATE PROCESS (How they do it today)

Current System / Tool	Physical leave request forms, email, WhatsApp
Process Description	Employees write a leave request on a printed form, sign it, and hand it to their manager. Manager approves or rejects verbally and signs the form. HR is informed by email or WhatsApp and updates the Excel leave tracker manually. Leave balances are calculated manually by HR at the beginning of each year. Sick leave does not require a form -- employee calls in and HR notes it in the tracker.
Pain Points / Challenges	• Leave balances are often inaccurate -- HR is not always informed of all leave taken • Paper forms get lost or are not filed properly • No visibility for employees to check their own leave balance • Leave clashes are not caught early (two people in the same team on leave at once) • Manual tracker is hard to audit at year-end

4. ACTIVITIES

#	Activity
1	HR allocates annual leave at start of year (or accrual monthly)
2	Employee submits leave request via Odoo
3	Manager receives notification and approves or rejects
4	If leave >5 days, HR Officer does second validation
5	Approved leave appears in team calendar
6	Leave balance is automatically deducted from employee allocation
7	HR runs leave reports monthly and at year-end

5. STEPS (Detailed Process Flow)

#	Step
1	HR Officer creates leave allocations at start of year: Time Off > Managers > Allocations > New -- assigns Annual Leave days per employee (or uses accrual plan for monthly accrual)
2	Employee logs into Odoo and navigates to Time Off > New Leave Request
3	Employee selects Leave Type, From Date, To Date, and adds a description/reason
4	Employee clicks Submit -- system sends notification email to line manager
5	Manager logs in, goes to Time Off > Managers > All Time Off, finds the request and clicks Approve or Refuse
6	If leave duration >5 days, request escalates to HR Officer for second validation
7	On approval: leave is deducted from employee's balance, leave appears in team calendar
8	Employee receives confirmation notification
9	If sick leave: employee calls HR, HR Officer creates the leave on behalf of the employee in Time Off > New, selects 'Sick Leave' type

6. BUSINESS RULES

R	Business Rule
R1	Annual leave must be requested at least 3 working days in advance (except emergency leave). Last-minute requests are at manager discretion.
R2	Annual leave days per year: 15 days for employees with <5 years service; 20 days for >=5 years. Confirm exact entitlements with HR.

R	Business Rule
R3	Sick leave beyond 3 consecutive days requires a medical certificate. HR Officer must attach the certificate to the leave record in Odoo.
R4	Maternity leave: 12 weeks (84 calendar days) per Ghana Labour Act 2003, Section 57. Full pay during maternity leave.
R5	Unused annual leave can be carried over to the following year -- maximum 10 days carry-over. Any excess lapses at 31 December.
R6	Leave cannot be approved if the employee's leave balance is zero (except sick leave which has no allocation limit).

7. PROPOSED ODOO 19 WORKFLOW

Odoo Module	Time Off (hr_holidays)
Navigation Path	Home > Time Off > New Leave Request (Employee) Time Off > Managers > All Time Off (HR/Manager)
Proposed Workflow	1. HR creates annual allocations in bulk at start of year using Time Off > Managers > Allocations 2. Employee logs in, navigates to Time Off, clicks 'New Time Off' button 3. Selects leave type from dropdown, picks date range, adds reason 4. System validates: is there sufficient balance? Is it a valid working day? Are there team clashes? 5. Notification sent to manager -- manager approves in Odoo or via email link 6. Leave record is created, balance deducted, team calendar updated automatically 7. HR Officer can view all leave across all departments from Time Off > Managers > All Time Off

8. GAP ANALYSIS

Gap Identified	Impact	Resolution
No leave balance visibility for employees	Employees currently cannot check their own leave balance	Odoo self-service portal gives employees real-time balance. No gap -- this is a new capability Greenwood gains.
No formal sick leave documentation process	Sick leave is informal (phone call to HR)	Create a 'Sick Leave' type in Odoo requiring medical certificate upload for absences >3 days. HR Officer creates the leave record.
No carry-over automation	Year-end carry-over is calculated manually	Configure carry-over rules in the Annual Leave activity type. Odoo auto-carries over up to the maximum on 1 January.

9. DATA REQUIREMENTS

Data Item	Description / Source	Status
Leave Entitlement Policy	Exact days per leave type per employee category	Pending -- HR Manager to confirm
Current Leave Balances	Each employee's remaining leave balance as of go-live date	Pending -- critical for opening allocations
Carry-Over Amounts	Any days carried over from previous year	Pending -- Finance/HR to confirm
Leave History	Past 12 months leave records (for reference)	Optional -- nice to have

10. OPEN ITEMS / ASSUMPTIONS

Open Items	- Confirm exact annual leave entitlement for each employee category (grade/years of service). - Confirm: Is there a 'comp leave' (compensatory leave for overtime worked)? If yes, create a 'Compensatory Leave' type. - Confirm: What happens to leave if employee resigns? Is it paid out? At what rate?
------------	--

11. SIGN-OFF

By signing below, Greenwood Supply Services confirms that the process documented above is accurate and approved for Odoo 19 configuration.

Name	Title / Role	Signature & Date
Greenwood Contact	Department Head / Process Owner	Date: _____
iSERD Consultant	Business Analyst	Date: _____
iSERD PM	Project Manager	Date: _____

1. CONTACT INFORMATION

Contact Person(s)	Procurement Manager, Finance Manager
Process Name	Purchase Request to Payment
Session Date	Wednesday 4 March 2026 (Day 1 Operations)
Conducted By	iSERD Business Analyst / Consultant

2. PLAYERS / ROLES

Role / Job Title	Responsibility	Odoo 19 User Role
Department Head / Requestor	Identifies the need and initiates a purchase request	Employee (Odoo) -- creates Purchase Request or alerts Procurement
Procurement Officer	Creates RFQ, manages vendor communication, converts to PO	Purchase User (Odoo)
Procurement Manager	Reviews and approves POs below GHS 10,000	Purchase Manager (Odoo)
Finance Director	Approves POs above GHS 10,000	Custom approver role via Approvals app
Warehouse Staff	Receives goods, validates GRN	Inventory User (Odoo)
Finance/Accounts	Matches vendor bill, processes payment	Accountant (Odoo)

3. CURRENT-STATE PROCESS (How they do it today)

Current System / Tool	WhatsApp, email, Excel purchase log, manual PO template (Word)
Process Description	When stock runs low or a need arises, the department head sends a WhatsApp message or email to the Procurement Manager. Procurement Manager gets quotes from vendors (via phone, WhatsApp, or email) and selects a vendor. A purchase order is created manually in a Word template, printed, signed by the Procurement Manager, and emailed to the vendor. For orders above GHS 10,000, the Finance Director must also sign the PO before it is sent. When goods arrive, the warehouse checks and signs a paper Goods Receipt Note (GRN). Vendor invoice is received by email or hand-delivered, matched manually to the PO and GRN, then sent to Finance for payment.

Pain Points / Challenges

- No centralised view of all open purchase orders
- Approval by Finance Director is done informally -- no audit trail
- PO numbers are manually assigned and sometimes duplicated
- Vendor invoices are sometimes paid before goods are received (3-way match failure)
- No visibility of spend per vendor or per category

4. ACTIVITIES

#	Activity
1	Purchase need identified by department
2	Procurement creates Request for Quotation (RFQ)
3	Vendor quotes received and compared
4	Best vendor selected, RFQ converted to Purchase Order
5	PO approved (Procurement Manager or Finance Director depending on value)
6	PO sent to vendor
7	Goods received and GRN validated
8	Vendor invoice received and matched to PO and GRN
9	Finance approves and processes payment

5. STEPS (Detailed Process Flow)

#	Step
1	Procurement Officer navigates to Purchase > Orders > Requests for Quotation > New
2	Selects vendor from Vendor dropdown (or creates a new vendor)
3	Adds product lines: product, description, quantity, expected price
4	Sets expected Delivery Date and Payment Terms
5	Clicks 'Send by Email' to send RFQ to vendor -- vendor replies with their quote
6	If multiple vendors: creates an RFQ per vendor, then uses 'Compare Lines' to compare prices
7	Selects best vendor and clicks 'Confirm Order' -- RFQ becomes a Purchase Order with auto-generated PO number
8	If PO is above GHS 10,000: Odoo triggers approval request to Finance Director. Purchase Order status = 'Waiting Approval'. Finance Director approves in Odoo or receives email link to approve.
9	Approved PO is emailed to vendor via Odoo (or PDF downloaded and sent manually)

#	Step
10	When goods arrive: Warehouse staff opens PO > Receipts tab > Validate Receipt -- enters actual quantities received, lot numbers, expiry dates
11	Vendor sends invoice. Finance Officer creates a vendor bill in Odoo: on the PO, clicks 'Create Bill' -- bill auto-populates from PO
12	Finance Officer matches bill to GRN (3-way match), posts the bill
13	Finance Manager approves payment, registers payment in Odoo from the vendor bill

6. BUSINESS RULES

R	Business Rule
R1	Purchase Orders above GHS 10,000 require Finance Director approval before being sent to the vendor. No PO above this threshold may be sent without this approval.
R2	Vendor invoices must be matched against the PO and GRN before payment is authorised. Payment cannot be processed if the GRN has not been validated.
R3	At least 3 quotes must be obtained for any single purchase above GHS 5,000. For orders below GHS 5,000, Procurement Manager may use a preferred vendor directly.
R4	Purchase Orders are assigned a sequential PO number by Odoo automatically. Manual PO numbers are not permitted.
R5	Partial deliveries are accepted. If a vendor delivers less than the full quantity, the GRN captures only what was received. The remaining quantity stays as an open receipt on the PO.

7. PROPOSED ODOO 19 WORKFLOW

Odoo Module	Purchase (purchase)
Navigation Path	Home > Purchase > Orders > Requests for Quotation / Purchase Orders

Proposed Workflow	8. Procurement Officer creates RFQ in Odoo: Purchase > New 9. Adds vendor, products, quantities, and expected delivery date 10. Sends RFQ to vendor via Odoo email 11. On vendor confirmation: Confirm Order in Odoo -- generates PO with auto number 12. If above threshold: approval workflow triggers automatically -- Finance Director notified 13. Once approved: Odoo sends PO confirmation to vendor 14. Warehouse validates receipt: PO > Receipt > Validate (with lot numbers and expiry dates) 15. Finance creates vendor bill from PO: PO > Create Bill -- 3-way match (PO + GRN + Bill) 16. Finance posts bill and registers payment 17. All three documents (PO, GRN, Bill) are linked in Odoo for full audit trail
--------------------------	---

8. GAP ANALYSIS

Gap Identified	Impact	Resolution
No formal Purchase Request workflow	Any department head can verbally request a purchase -- no formal request document	Implement a simple internal purchase request using Odoo's Purchase Request feature or Notes module. PR is approved before an RFQ is created. Alternatively, use the Inventory reorder rules which auto-generate RFQs when stock drops below minimum.
Approval for GHS 10,000+ is informal	Finance Director approval is done via WhatsApp/verbal -- no audit trail	Configure Odoo's built-in PO approval threshold. For multi-level approval, install the Approvals app and set up a formal approval chain in Odoo.

9. DATA REQUIREMENTS

Data Item	Description / Source	Status
Vendor Master List	All vendor names, contact details, payment terms, bank accounts	Pending -- template sent to Greenwood
Product/Item Codes	Standard product codes or references used for procurement	Linked to Inventory module data
Approval Thresholds	Exact GHS values for each approval level	Pending -- Finance Director to confirm
Payment Terms per Vendor	Net 30? Net 15? COD?	Pending -- Procurement Manager to provide per vendor

10. OPEN ITEMS / ASSUMPTIONS

Open Items	- Confirm: Is there a formal internal Purchase Requisition (PR) step before an RFQ is created? Or does Procurement act directly on verbal/email requests? - Confirm: For purchases below GHS 2,000 -- is any approval needed at all, or can Procurement proceed directly? - Assumption: Standard vendor payment terms are Net 30 days unless otherwise agreed. Confirm.
------------	---

11. SIGN-OFF

By signing below, Greenwood Supply Services confirms that the process documented above is accurate and approved for Odoo 19 configuration.

Name	Title / Role	Signature & Date
Greenwood Contact	Department Head / Process Owner	Date: _____
iSERD Consultant	Business Analyst	Date: _____

Name	Title / Role	Signature & Date
iSERD PM	<i>Project Manager</i>	Date: _____

1. CONTACT INFORMATION

Contact Person(s)	Warehouse Manager, Store Keeper
Process Name	Stock Receiving, Management, and Dispatch
Session Date	Wednesday 4 March 2026 (Day 1 Operations)
Conducted By	iSERD Business Analyst / Consultant

2. PLAYERS / ROLES

Role / Job Title	Responsibility	Odoo 19 User Role
Store Keeper	Receives goods, updates stock, manages bin locations	Inventory User (Odoo)
Warehouse Manager	Oversees all warehouse operations, approves stock adjustments	Inventory Manager (Odoo)
Procurement Officer	Raises POs based on stock levels, reviews reorder alerts	Purchase User (Odoo)
Delivery Driver / Dispatch	Picks and dispatches goods per delivery orders	Inventory User (Odoo) -- limited

3. CURRENT-STATE PROCESS (How they do it today)

Current System / Tool	Physical stock cards (bin cards), Excel spreadsheet updated weekly
Process Description	Goods arriving at the warehouse are physically counted and compared to the supplier's delivery note. A paper Goods Received Note (GRN) is filled in manually. One copy goes to the Procurement team, one is filed in the warehouse. Stock levels are recorded on physical bin cards attached to each shelf location. The Excel stock tracker is updated once or twice a week (not in real time). Expiry dates are checked visually during receiving and written on the bin card in red. FIFO is the intention but is enforced informally -- there is no formal process to ensure oldest stock goes out first. When stock needs to be dispatched, the warehouse team picks goods based on the delivery order (printed from a PDF template).
Pain Points / Challenges	• Stock levels in Excel are always out of date -- real-time visibility is impossible • Expiry tracking is manual and unreliable -- near-expired goods are sometimes not caught

- FIFO/FEFO is not enforced consistently -- wrong lots are sometimes picked
- Discrepancies between physical stock and the Excel tracker are common
- No low-stock alerts -- procurement is notified too late, causing stockouts

4. ACTIVITIES

#	Activity
1	Receive incoming goods from vendor against a Purchase Order
2	Update stock balances and record lot numbers and expiry dates
3	Store goods in correct location (cold storage, dry goods, etc.)
4	Monitor stock levels and trigger replenishment when below minimum
5	Pick goods for customer orders following FEFO sequence
6	Validate delivery order and dispatch goods
7	Conduct periodic stock counts and reconcile with system

5. STEPS (Detailed Process Flow)

#	Step
1	Goods arrive at warehouse. Store Keeper opens Odoo on warehouse tablet: Inventory > Receipts
2	Finds the pending receipt linked to the Purchase Order. Opens it.
3	Compares physical delivery to the PO quantities. Enters actual received quantities in the 'Done' column.
4	For lot-tracked products: clicks the lot number icon and creates a new lot for each batch received. Enters the expiry date on the lot record.
5	Clicks Validate -- stock is added to the correct warehouse location. Journal entry auto-posts to Accounting (stock valuation).
6	If there is a discrepancy (short delivery or damaged goods): creates a backorder for the missing quantity or scrap entry for damaged goods.
7	For customer orders: Inventory > Delivery Orders -- finds the pending delivery linked to a confirmed sales order.
8	Picks goods from warehouse. Odoo suggests the correct lot to pick first (FEFO -- earliest expiry date).
9	Enters actual quantities picked (by lot) in the Done column. Validates the delivery.
10	Delivery Note is auto-generated and can be printed from Odoo for the driver.

6. BUSINESS RULES

R	Business Rule
R1	All goods received must be matched against a confirmed Purchase Order in Odoo. Goods cannot be received without an open PO.
R2	All perishable products (fresh produce, dairy) must have a Lot Number and Expiry Date entered at the time of receipt. Receiving without an expiry date is not permitted for these product categories.
R3	FEFO (First Expired, First Out) strategy is enforced for all perishable product categories. Odoo automatically suggests the correct lot to pick.
R4	Stock adjustments (corrections to quantity) must be approved by the Warehouse Manager. Store Keepers cannot adjust stock without approval.
R5	A physical stock count must be conducted at the end of each month. The count results must be validated and any variances investigated and documented.
R6	Products with an expiry date within 7 days must be flagged immediately to the Warehouse Manager and Procurement for action (use urgently or dispose per policy).

7. PROPOSED ODOO 19 WORKFLOW

Odoo Module	Inventory (stock)
Navigation Path	Home > Inventory > Operations > Receipts / Delivery Orders / Transfers
Proposed Workflow	18. Incoming goods: Inventory > Receipts > find pending receipt from PO > enter quantities and lot/expiry data > Validate 19. Stock auto-updates at the warehouse location. Odoo posts stock valuation entry to Accounting. 20. Outgoing goods: Sales Order confirmed > Delivery Order auto-created > Warehouse picks goods (FEFO sequence suggested by Odoo) > Validate delivery 21. Internal transfers: Inventory > Transfers > New > From: Main Stock > To: Cold Storage > add products > Validate 22. Low stock alert: Odoo automatically shows products below reorder point in Inventory > Operations > Replenishment 23. Stock count: Inventory > Operations > Physical Inventory > enter actual counts > Validate adjustment

8. GAP ANALYSIS

Gap Identified	Impact	Resolution
No real-time stock visibility	Excel tracker is always outdated	Odoo provides real-time stock levels. No gap once system is live.
FEFO not enforced	Oldest expiry stock is not always picked first	Odoo enforces FEFO via removal strategy on product category. System prevents picking newer lots before older ones.
No formal reorder alert system	Procurement is notified verbally when stock is low	Configure Odoo reorder rules (minimum quantity) per product. When stock drops below minimum, Odoo auto-creates a draft

Gap Identified	Impact	Resolution
		PO or shows the product in Replenishment dashboard.

9. DATA REQUIREMENTS

Data Item	Description / Source	Status
Product Master List	All product names, codes, categories, UoM, cost price, sales price	Pending -- template sent to Greenwood
Opening Stock Quantities	Current on-hand quantity per product at each location as of go-live date	Pending -- physical stock count required
Opening Lot Numbers	Existing lot numbers and expiry dates for all perishable stock on hand	Pending -- warehouse team to provide
Warehouse Location Map	All physical storage areas and their names	Pending -- Warehouse Manager to sketch
Reorder Points	Minimum stock level per product that triggers replenishment	Pending -- Procurement/Warehouse to agree

10. OPEN ITEMS / ASSUMPTIONS

Open Items	- Confirm: Are there any products where the purchase unit differs from the storage unit (e.g. buy in 25kg bags, stock in kg)? - Confirm: Does Greenwood ship from both Ghana and Namibia warehouses? Are there products specific to each location? - Assumption: FEFO applies to ALL fresh produce and dairy. Dry goods use FIFO. Confirm this per category.

Name	Title / Role	Signature & Date
Greenwood Contact	Department Head / Process Owner	Date: _____
iSERD Consultant	Business Analyst	Date: _____
iSERD PM	Project Manager	Date: _____

1. CONTACT INFORMATION

Contact Person(s)	Sales Manager, Sales Officer
Process Name	Quotation to Customer Invoice
Session Date	Wednesday 4 March 2026 (Day 1 Operations)
Conducted By	iSERD Business Analyst / Consultant

2. PLAYERS / ROLES

Role / Job Title	Responsibility	Odoo 19 User Role
Sales Officer	Creates quotations and orders, communicates with customers	Sales User (Odoo)
Sales Manager	Approves discounts, manages key accounts, reviews sales reports	Sales Manager (Odoo)
Customer Service	Handles customer queries, tracks delivery status	Sales User (Odoo) -- read access
Finance Officer	Sends invoices, tracks payments, follows up overdue accounts	Accountant (Odoo)

3. CURRENT-STATE PROCESS (How they do it today)

Current System / Tool	WhatsApp, email, Excel order tracker, manual Word invoice template
Process Description	Customers place orders by WhatsApp, email, or phone call to the Sales team. Sales Officer records the order in an Excel order tracker and manually creates an invoice in Word. Invoices are printed and handed to the delivery driver along with the goods. No formal quotation process -- prices are communicated verbally or by WhatsApp and confirmed informally. Different customer types (hospitality, maritime, oil & gas) get different prices, but these are maintained in a separate Excel price list that Sales uses informally.
Pain Points / Challenges	• No formal quotation -- verbal price agreement causes billing disputes • Price list is maintained manually and may be out of date • Order status is not tracked -- customer calls to ask about delivery, Sales does not know • Duplicate invoices have been raised by mistake • No credit limit enforcement -- some customers owe large outstanding amounts but keep ordering

4. ACTIVITIES

#	Activity
1	Customer inquiry received
2	Quotation created and sent to customer
3	Customer confirms order -- quotation converted to Sales Order
4	Delivery Order auto-generated and assigned to warehouse
5	Goods delivered and delivery note signed
6	Invoice created and sent to customer
7	Payment received and matched to invoice

5. STEPS (Detailed Process Flow)

#	Step
1	Sales Officer opens Odoo: Sales > Orders > Quotations > New
2	Selects Customer from dropdown -- pricelist auto-applies based on customer type
3	Sets Payment Terms, Delivery Date, Sales Order expiry date
4	Adds products on the order lines. Price auto-fills from the pricelist. Discount field is visible if enabled.
5	Clicks 'Send by Email' to send quotation PDF to customer
6	Customer replies confirming the order. Sales Officer clicks 'Confirm' in Odoo -- order status changes to Sales Order
7	Delivery Order is automatically created and appears in Inventory > Delivery Orders
8	Warehouse validates delivery (stock picked and dispatched)
9	Sales Officer or Finance Officer creates invoice: on the confirmed SO, clicks 'Create Invoice'
10	Selects invoice type: Full Invoice or Partial (if partial delivery)
11	Finance Officer posts the invoice and sends it to the customer by email
12	Customer pays. Finance Officer registers payment in Odoo -- invoice is marked as paid.

6. BUSINESS RULES

R	Business Rule
R1	All sales to credit customers must be on a confirmed written quotation. Verbal orders without a confirmed Odoo Sales Order are not permitted.

R	Business Rule
R2	Discounts above 5% on any order line require Sales Manager approval before the quotation is confirmed.
R3	Customer credit limits are enforced. If a customer's outstanding balance exceeds their credit limit, a warning is shown. Sales Manager must override to proceed.
R4	Invoices are created only after delivery is validated -- not at the time of order confirmation (invoice what is delivered policy).
R5	Partial deliveries result in partial invoices. The remaining undelivered quantity generates a back-order delivery and a future invoice.

7. PROPOSED ODOO 19 WORKFLOW

Odoo Module	Sales (sale_management)
Navigation Path	Home > Sales > Orders > Quotations > New
Proposed Workflow	24. Customer contacts Sales team (phone/WhatsApp/email/Odoo portal) 25. Sales Officer creates Quotation in Odoo: customer selected, pricelist auto-applies, products added 26. Quotation PDF generated and emailed to customer from Odoo 27. Customer confirms: Sales Officer clicks Confirm -- becomes a Sales Order with auto-number 28. Delivery Order auto-created in Inventory -- warehouse team picks and dispatches 29. After delivery validation: Sales Officer clicks Create Invoice -- invoice auto-populated from SO 30. Invoice emailed to customer from Odoo. Payment registered on receipt. 31. Sales Manager views Sales Analysis report for performance tracking

8. GAP ANALYSIS

Gap Identified	Impact	Resolution
No formal quotation process currently	Verbal price agreement causes disputes	Odoo quotation flow with email send creates a formal, documented agreement. First time Greenwood will have a quotation audit trail -- significant improvement.
Manual Excel price list	Different customer prices maintained manually	Create Odoo Pricelists per customer segment (Hospitality, Maritime, Oil & Gas, Corporate). Prices automatically apply based on customer. Eliminates manual price list.
No credit limit enforcement	Some customers over-ordered on credit	Configure credit limits per customer in Odoo. Warning appears when limit is exceeded. Prevents bad debt accumulation.

9. DATA REQUIREMENTS

Data Item	Description / Source	Status
Customer Master List	All customer names, type (hospitality/maritime/corporate), contact, payment terms, credit limit	Pending -- template sent to Greenwood
Price Lists	Prices per product per customer segment	Pending -- Sales Manager to provide
Outstanding Customer Balances	Opening AR balances as of go-live date per customer	Pending -- Finance to provide
Discount Policy	Maximum discount % per role	Pending -- Sales Manager to confirm

10. OPEN ITEMS / ASSUMPTIONS

Open Items	- Confirm: Does Greenwood use pro-forma invoices before delivery? If yes, enable in Odoo settings. - Confirm: Are there any customers on fixed long-term contracts with locked prices? These need separate pricelists. - Assumption: All sales are invoiced on delivery (not on order). Confirm with Finance.

11. SIGN-OFF

By signing below, Greenwood Supply Services confirms that the process documented above is accurate and approved for Odoo 19 configuration.

Name	Title / Role	Signature & Date
Greenwood Contact	Department Head / Process Owner	Date: _____
iSERD Consultant	Business Analyst	Date: _____
iSERD PM	Project Manager	Date: _____

1. CONTACT INFORMATION

Contact Person(s)	Finance Manager, Chief Accountant
Process Name	Financial Accounting -- Invoicing, Payments, Reconciliation, Reporting
Session Date	Thursday 5 March 2026 (Day 2)
Conducted By	iSERD Business Analyst / Consultant

2. PLAYERS / ROLES

Role / Job Title	Responsibility	Odoo 19 User Role
Finance Officer	Raises customer invoices, records vendor bills, registers payments	Accountant (Odoo)
Chief Accountant	Reviews and posts journal entries, performs bank reconciliation	Accountant (Odoo)
Finance Manager	Approves payments above GHS 5,000, reviews financial reports	Accounting Administrator (Odoo)
Finance Director	Approves payments above GHS 50,000, reviews monthly financial close	Accounting Administrator (Odoo) -- read only for reporting

3. CURRENT-STATE PROCESS (How they do it today)

Current System / Tool	QuickBooks (partially used), Excel for some reporting, manual bank statements
Process Description	The accounting team uses QuickBooks for basic invoicing and bill recording but many transactions are still in Excel. Bank reconciliation is done at month-end by downloading a bank statement and manually matching each line to QuickBooks transactions. Payroll journal entries are entered manually into QuickBooks after the payroll is run separately. Tax reports (VAT) are compiled manually at quarter-end from QuickBooks data plus Excel adjustments. Financial reports (P&L, Balance Sheet) are generated from QuickBooks but require significant manual adjustment.
Pain Points / Challenges	- Dual system (QuickBooks + Excel) causes data inconsistency and rework - Bank reconciliation takes 2-3 days at month end - VAT report requires manual consolidation -- high risk of error - No real-time cash flow visibility

- Intercompany transactions between Ghana and Namibia are tracked manually

4. ACTIVITIES

#	Activity
1	Post customer invoices and send to customers
2	Record and process vendor bills
3	Register customer payments and vendor payments
4	Perform monthly bank reconciliation
5	Post payroll journal entries after payroll run
6	Prepare and submit VAT return
7	Generate monthly P&L, Balance Sheet, Cash Flow reports
8	Manage inter-company entries (Ghana and Namibia)

5. STEPS (Detailed Process Flow)

#	Step
1	Customer invoice: Finance Officer goes to Accounting > Customers > Invoices > New (or is auto-created from Sales Order delivery)
2	Adds customer, products, taxes (VAT 15%), posts the invoice. Invoice is emailed to customer.
3	Customer payment received: on the posted invoice, Finance Officer clicks Register Payment, selects bank journal, enters amount and date, confirms.
4	Vendor bill: Accounting > Vendors > Bills > New (or auto-created from Purchase Order). Enters vendor, products, taxes, due date. Posts bill.
5	Vendor payment: on the posted bill, clicks Register Payment, enters amount, bank journal, confirms.
6	Bank reconciliation: Accounting > Accounting > Bank > Import Statement (CSV from bank) -- Odoo auto-matches transactions to posted payments and receipts. Manual items are resolved individually.
7	VAT Report: Accounting > Reporting > Tax Report -- selects quarter and country (Ghana). Generates VAT return figures for GRA submission.
8	Monthly reports: Accounting > Reporting > Profit and Loss, Balance Sheet, Cash Flow Statement

6. BUSINESS RULES

R	Business Rule
R1	All vendor payments above GHS 5,000 require Finance Manager approval before the payment is processed in Odoo.

R	Business Rule
R2	VAT at 15% applies to all standard goods and services. VAT-exempt customers must have the correct Fiscal Position assigned to their record so VAT is not charged incorrectly.
R3	No accounting period may be reopened for posting after the Finance Manager has locked the period (end of each month). Any corrections after lock require a journal entry in the current period.
R4	All customer invoices must be sent from Odoo (not manually). This creates a formal, timestamped record of when the invoice was sent.
R5	Bank reconciliation must be completed within 5 working days of month-end. No financial reports may be published before reconciliation is done.

7. PROPOSED ODOO 19 WORKFLOW

Odoo Module	Accounting (account_accountant)
Navigation Path	Home > Accounting > Customers / Vendors / Accounting / Reporting
Proposed Workflow	32. All customer invoices flow from confirmed and delivered Sales Orders -- Finance Officer reviews and posts 33. All vendor bills flow from validated Goods Receipts (3-way match) -- Finance Officer reviews and posts 34. Payments: Register Payment directly on the invoice/bill in Odoo -- bank journal automatically updated 35. Bank reconciliation: monthly bank statement imported via CSV. Odoo auto-matches 80%+ of transactions. 36. Payroll journal entries: auto-posted from Payroll module after payroll validation 37. VAT Report: auto-generated by Odoo based on posted transactions -- no manual compilation 38. Financial reports: available in real time from Accounting > Reporting -- no month-end export needed

8. GAP ANALYSIS

Gap Identified	Impact	Resolution
Migration from QuickBooks	Greenwood has existing history in QuickBooks	Migrate opening balances (AR, AP, Bank, Equity) into Odoo as of go-live date. Historical QuickBooks data stays in QuickBooks for reference -- not migrated into Odoo.
Manual VAT compilation	VAT is compiled from multiple sources	Odoo auto-tags all transactions with VAT codes. VAT return is generated in one click. Significant improvement -- no gap to resolve, just configure taxes correctly.
No formal payment approval workflow	Large payments are approved verbally	Configure Odoo payment approval: payments above GHS 5,000 require Finance Manager to approve before processing. Creates formal digital approval trail.

9. DATA REQUIREMENTS

Data Item	Description / Source	Status
Chart of Accounts	Full CoA structure -- account codes and names	Pending -- Finance Manager to provide QuickBooks CoA export
Opening Balances	AR, AP, Bank, Equity balances as of go-live date	Pending -- critical for system launch
Bank Account Details	Bank names, account numbers, SWIFT/IBAN if applicable	Pending -- Finance to provide
Customer Opening Balances	Outstanding invoices per customer as of go-live	Pending -- aged receivables report from QuickBooks
Vendor Opening Balances	Outstanding bills per vendor as of go-live	Pending -- aged payables report from QuickBooks
Tax Registration Numbers	Ghana TIN, VAT registration number	Pending -- Finance

10. OPEN ITEMS / ASSUMPTIONS

Open Items	- Confirm: Is Namibia a separate legal entity for accounting purposes? If yes, separate CoA and tax configuration needed. - Confirm: Does Greenwood invoice in GHS only or also USD (e.g. maritime/oil & gas clients)? - Assumption: Ghana VAT rate is 15%. Confirm no reduced rates apply to Greenwood's product categories. - Confirm the exact go-live date so Finance can prepare trial balance as of that date for opening balances entry.
