

GREENWOOD SUPPLY SERVICES

Odoo 19 Implementation | iSERD Technology Solutions

PHASE 2 — REALISATION

Complete Step-by-Step Configuration, UAT & Training Guide

Weeks 2–3 | Monday 9 March — Friday 20 March 2026

Sprint Goal: Configure all 13 Odoo 19 modules, load master data, run UAT, and obtain client sign-off

Odoo Version: All navigation paths, menu names, settings, and features described in this guide are specific to Odoo 19. Always ensure you are working in the correct environment.

Two Stages: Stage 1 (Week 2) — Base Configuration of all 13 modules. Stage 2 (Week 3) — Advanced configuration, master data, UAT with Greenwood, and training delivery.

PHASE 2 OVERVIEW

What Phase 2 Is About

Phase 2 is where Odoo actually gets built. Everything you learned and documented in Phase 1 becomes the blueprint for this phase. You take the signed BPM document and configure every single module in Odoo 19 to match exactly how Greenwood Supply Services runs their business.

Phase 2 has two distinct stages. In Stage 1 (Week 2), you build the base configuration of all 13 modules — the foundation. In Stage 2 (Week 3), you add advanced configurations, load all master data, and run User Acceptance Testing (UAT) sessions with Greenwood's actual users to confirm the system works as agreed.

Do not assume or guess any configuration. Every setting, workflow, and rule must trace directly back to a decision documented in the signed BPM. If something was not covered in the BPM, do not configure it — raise a Change Request.

Phase 2 Staged Timeline

Stage	Week	Sprint Goal	Key Activities
Stage 1	Week 2 9–13 Mar	Base config of all 13 modules demo-ready by Friday	Install modules • Configure core settings per module • Set up workflows • Begin master data structure • Internal QA & print formats
Stage 2	Week 3 16–20 Mar	Full system with advanced config, master data loaded, UAT done and signed	Advanced config & automations • Full master data load • UAT sessions with Greenwood • Bug fixing • Training sessions • UAT Report

Before you begin: Gate 1 must be fully cleared — BPM signed off by Greenwood, all 13 module BPMs documented, master data templates sent. If any of these are not done, do NOT begin Phase 2.

MONDAY WEEK

2

9 March 2026

Environment Setup | Install Modules | Inventory Base Config

Sprint Goal for Monday: Get the Odoo 19 instance fully set up — company configured, all 13 modules installed — and complete the base configuration of Inventory & Warehouse.

STEP 1 — SPRINT PLANNING (9:00 AM)

Start the day with a Sprint Planning session. Break every module configuration task from the signed BPM into individual task cards on the sprint board. Assign each to the responsible developer. Priority order: Inventory → Purchase → Sales → Accounting → HR group → Expenses → Appraisal → Assets → Project → Document.

- Create sprint board for Week 2 — label it 'Phase 2 Stage 1 — Base Configuration'
- Sprint goal: 'All 13 modules base-configured and demo-ready by internal QA on Friday 13 March'
- Assign module owners: who builds what, in what order
- Flag any BPM gaps still open that could block configuration — resolve before building

STEP 2 — ODOO 19 ENVIRONMENT SETUP

Odoo 19 Note: Odoo 19 uses the updated Home Menu (app switcher grid top-left). Developer Mode is essential — activate it before doing ANY technical configuration.

2A — Activate Developer Mode

#	Navigation Path — Odoo 19	What to Do & Configure
1	Settings App → General Settings → Scroll to bottom → Developer Tools	Click 'Activate the developer mode'. The page reloads. You will see 'debug' in the URL and a bug icon appears in the top bar. • This unlocks Technical menus, extra fields, and advanced configuration options ⚠ Always work in developer mode during configuration

2B — Company Configuration

Navigate to Settings > Companies > Companies. You should see one company already created when the database was set up. Configure it fully now.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Settings → Companies → Companies → Click the company name	Set the Company Name exactly as it appears on legal documents: 'Greenwood Supply Services' • Upload the company logo (PNG, used on all print reports) • Set Company Tagline if needed
2	Company form → General Info tab	Fill in: • Street address (Ghana headquarters) • City, Country: Ghana • Phone, Email, Website • Company Registry / Tax ID (Ghana TIN number) • Currency: GHS (Ghanaian Cedi) — set as primary
3	Company form → General Info tab	Set Fiscal Year: • If January–December: leave as default

#	Navigation Path — Odoo 19	What to Do & Configure
		• If different: go to Accounting > Configuration > Settings > Fiscal Year • Set timezone: Africa/Accra • Set language: English (UK or US based on preference)
4	Settings → Companies → Companies → New (if Namibia is a separate entity)	If Namibia operations require a separate legal entity: • Create a second company: 'Greenwood Supply Services Namibia' • Set Country: Namibia • Currency: NAD (Namibian Dollar) • Assign the same admin user to both companies ⚠ Confirm with client — is Namibia a separate legal entity or just a branch?
5	Settings → General Settings → Companies section	If multi-company: enable 'Allow inter-company transactions' if intercompany stock movements or billing is needed • Set up company switching from top-right menu (user avatar > Switch Company)

2C — Install All 13 Modules

In Odoo 19, modules are installed from the Apps menu. Go to the Home screen (9-dot grid icon) and click 'Apps'. Remove the 'Apps' filter to see all modules.

Important: Install modules in this order to ensure proper dependencies are resolved: Employees → Attendance → Time Off → Payroll → Expenses → Appraisal → Purchase → Inventory → Sales → Accounting → Assets → Project → Documents

#	Navigation Path — Odoo 19	What to Do & Configure
1	Home Menu (9-dot grid icon) → Apps	Search for and install each module below. Wait for each installation to complete before the next: • Employees (hrms) • Attendances • Time Off (hr_holidays) • Payroll (hr_payroll) • Expense (hr_expense) • Appraisals (hr_appraisal) • Purchase (purchase) • Inventory (stock) • Sales (sale_management) • Invoicing/Accounting (account_accountant) • Assets (account_asset) • Project (project) • Documents (documents) ⚠ After installing, refresh the page each time to see updated menus
2	Settings → General Settings → Language section	Verify the installed language is English. If users need French (Francophone clients), install the French language pack too. • Set date format: DD/MM/YYYY for Ghana standard
3	Settings → General Settings → Discuss section	Enable: • Discuss (messaging, internal chat — already on by default) • Log notes on all documents (important for audit trail) • Email gateway if using Odoo to send emails

STEP 3 — INVENTORY & WAREHOUSE CONFIGURATION

3A — Enable Inventory Settings

Reference: Configure ONLY what was confirmed in the BPM. Every setting enabled here must map back to a decision from the Greenwood discovery sessions.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Inventory → Configuration → Settings → Warehouse section	Enable based on BPM: • Storage Locations — enable this (needed for bin-level tracking) • Multi-Step Routes — enable if Greenwood uses 2-step or 3-step receipts/deliveries (confirm from BPM) • Dropshipping — only if confirmed needed • Purchase: Reception in one or two steps? Set per BPM • Sales: Shipping in one, two, or three steps? Set per BPM
2	Inventory → Configuration → Settings → Traceability section	Enable: • Lots & Serial Numbers — if tracking individual units or batches (confirm from BPM — likely YES for food supply) • Expiration Dates — MUST enable for Greenwood (food supply company with freshness tracking) ⚠ Once Expiration Dates is enabled, all relevant products must have 'Tracking' set to 'By Lot' or 'By Serial Number'
3	Inventory → Configuration → Settings → Operations section	Enable: • Packages — if Greenwood packs goods into boxes/pallets before shipping • Batch Transfers — if warehouse picks multiple orders together • Putaway Rules — enable for organised storage location assignment • Quality Control — only if confirmed in BPM
4	Inventory → Configuration → Settings → Valuation section	Set inventory valuation method per BPM: • Automated (recommended for Greenwood — posts journal entries automatically) • Costing method: First In First Out (FIFO) or Average Cost (AVCO) — confirm from BPM ⚠ For food supply with expiry tracking, FIFO or FEFO is typically correct

3B — Create Warehouses

#	Navigation Path — Odoo 19	What to Do & Configure
1	Inventory → Configuration → Warehouses → New	For each physical warehouse/location confirmed in BPM: • Short Name: e.g. 'GH-WH1' (Ghana Warehouse 1) • Warehouse Name: e.g. 'Greenwood Accra Main Warehouse' • Company: select the correct company • Inbound Shipments: set to 1, 2, or 3 steps per BPM • Outbound Shipments: set to 1, 2, or 3 steps per BPM
2	Inventory → Configuration → Warehouses	For Namibia warehouse (if applicable): • Short Name: 'NA-WH1' • Name: 'Greenwood Namibia Warehouse' • Company: Greenwood Namibia (if separate entity) ⚠ Each warehouse auto-creates its own stock locations — check under Locations

3C — Configure Storage Locations

Locations form the hierarchy of your warehouse: Physical Locations > Warehouse > Zone > Row > Bin. Configure as detailed in BPM.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Inventory → Configuration → Locations	The system creates default locations automatically: • WH/Stock — main stock location • WH/Input — goods receipt area (if 2-step) • WH/Output — dispatch staging area • WH/Packing Zone — if 3-step • WH/Quality Control — if enabled Verify these exist for each warehouse
2	Inventory → Configuration → Locations → New (for each zone)	Create sub-locations per BPM: Example structure: • WH/Stock/Cold Storage (for fresh produce) • WH/Stock/Dry Goods • WH/Stock/Beverages • WH/Stock/Packaging Materials • WH/Stock/Quarantine (for goods on hold) Set 'Is a Scrap Location?' = No for all storage zones Set 'Barcode' if warehouse uses barcode scanning
3	Inventory → Configuration → Locations → Virtual Locations	Verify virtual locations exist: • Virtual/Inventory Adjustments (for stock counts) • Virtual/Scrap (for scrapped goods) • Partner Locations/Customers (deliveries out) • Partner Locations/Vendors (receipts in) ⚠ Do NOT delete or modify virtual locations

3D — Set Up Product Categories

#	Navigation Path — Odoo 19	What to Do & Configure
1	Inventory → Configuration → Product Categories → New	Create product categories per BPM. Example for Greenwood: • Fresh Produce (costing: FIFO, removal strategy: FEFO) • Dry Goods (costing: AVCO) • Beverages • Dairy Products • Frozen Goods • Cleaning & Hygiene Supplies • Packaging Materials For each category, set: • Costing Method (FIFO/AVCO/Standard) • Force Removal Strategy: First Expiry First Out (FEFO) for perishables • Account Properties (link to Accounting — stock input, output, valuation accounts)
2	Inventory → Configuration → Product Categories	For each category, expand 'Account Properties' section: • Stock Valuation Account: usually '1401 Stock' or similar from CoA • Stock Journal: 'Stock Journal' (auto-created) • Price Difference Account: for purchase price variances ⚠ These accounts must match what was set up in Accounting — configure Accounting first if doing simultaneously

3E — Units of Measure (UoM)

#	Navigation Path — Odoo 19	What to Do & Configure
1	Settings → Inventory	Go to Inventory > Configuration > Settings > Products section • Enable 'Units of Measure' checkbox

#	Navigation Path — Odoo 19	What to Do & Configure
	→ Enable: Units of Measure	• Save ⚠ This adds the UoM fields on products and allows purchase/sale in different units than storage
2	Inventory → Configuration → Units of Measure	Verify or create the UoM groups needed per BPM: • Weight: g, kg, tonnes (conversion: 1000g=1kg, 1000kg=1 tonne) • Volume: ml, litre, m³ • Length: cm, m • Time: minutes, hours, days • Unit: pieces, cartons, pallets, boxes • Create custom UoM as needed (e.g. 'Crate', 'Drum', 'Bag 25kg')
3	Inventory → Configuration → Units of Measure → New UoM in a group	For a custom UoM like '25kg Bag': • Category: Weight • Name: Bag 25kg • Type: Bigger than the reference Unit of Measure • Ratio: 25 (i.e. 1 Bag 25kg = 25 kg) • Rounding Precision: 1.000

3F — Configure Reorder Rules & Replenishment

#	Navigation Path — Odoo 19	What to Do & Configure
1	Inventory → Configuration → Settings → Advanced Scheduling	Enable 'Replenishment Routines' / 'Multi-Step Routes' • This enables orderpoint-based replenishment (reorder rules)
2	Inventory → Operations → Replenishment	After products are created (master data load), come back here to set up: • Minimum Quantity (reorder point) • Maximum Quantity (max stock level) • Quantity Multiple (order in multiples of X) • Product and Location per rule • Route: Buy (triggers PO) or Manufacture (triggers MO) ⚠ Set up these rules AFTER master data (products) are loaded in Thursday's session

Daily Standup at 9:30 AM sharp. 15 minutes only. What did you complete yesterday? What are you building today? Any blockers?

MODULE: PURCHASE CONFIGURATION

Purchase Settings

#	Navigation Path — Odoo 19	What to Do & Configure
1	Purchase → Configuration → Settings	Enable based on BPM: • Purchase Order Approval: enable and set minimum amount (GHS threshold above which PO requires manager approval) • Purchase Lock: enable 'Lock Confirmed Purchase Orders' — prevents editing after confirmation • Vendor Pricelists: enable if vendors provide price lists • Purchase Warnings: enable to flag when ordering from blocked vendors • Blanket Orders: enable if Greenwood uses standing agreements with vendors
2	Purchase → Configuration → Settings → Invoicing	Set Bill Control policy: • 'Based on received quantities' — pay vendor only after goods received (recommended for Greenwood) • 'Based on purchase orders' — pay vendor immediately on PO confirmation (only if prepayment model) ⚠ Confirm with BPM which method Greenwood uses
3	Purchase → Configuration → Settings	Set Purchase Order Approval threshold: • Example: Orders above GHS 5,000 require manager approval • Enter the GHS amount in the 'Purchase Order Approval' field • All orders above this amount will require a manager to approve before sending to vendor

Purchase Payment Terms

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Payment Terms → New	Create vendor payment terms per BPM: • 'Net 30 Days' — full payment due 30 days from invoice date • 'Net 15 Days' • '2/10 Net 30' — 2% discount if paid within 10 days, otherwise net 30 • 'Cash on Delivery' • 'Advance Payment 50%' — 50% now, 50% on delivery For each: set the term name, and define the payment lines (% due, days, type)
2	Purchase → Configuration → Settings → Vendor section	After creating payment terms, go to each vendor record and assign their default payment term • This auto-fills on all POs for that vendor • Can be overridden per PO if needed

Approval Matrix — Multi-Level Purchase Approval

Odoo 19 Note: Odoo's standard purchase approval is a single-level (above threshold = manager approves). For multi-level approvals (e.g. team lead → manager → director), you need to configure approval workflows using the built-in 'Approvals' app or discuss a custom flow with the client.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Purchase → Configuration → Settings	Set the approval amount threshold per BPM. Example from Greenwood BPM: - Below GHS 2,000 — no approval needed (auto-confirmed) - GHS 2,000–10,000 — requires Procurement Manager approval - Above GHS 10,000 — requires Finance Director approval ⚠ Standard Odoo 19 supports one threshold. Document the multi-level need and discuss with senior if a custom rule or workflow is needed
2	Apps → Search 'Approvals' → Install if needed	If multi-level approval is required: - Install the 'Approvals' app - Go to Approvals > Configuration > Approval Types - Create a 'Purchase Order Approval' type with stages and approvers per BPM - This routes POs through a formal approval chain before they can be confirmed

MODULE: SALES CONFIGURATION

Sales Settings

#	Navigation Path — Odoo 19	What to Do & Configure
1	Sales → Configuration → Settings → Pricing section	Enable based on BPM: - Pricelists — MUST enable if Greenwood has different prices for different customer groups (Hospitality vs Maritime vs Oil & Gas vs Corporate) - Discounts — enable if salespeople can apply manual discounts on order lines - Margins — enable to show profit margin per order line - Sales Warnings — enable to flag special instructions for certain customers
2	Sales → Configuration → Settings → Quotations & Orders	Enable: - Quotation Templates — enable if Greenwood has standard product bundles or service packages - Lock Confirmed Sales — prevents editing after order is confirmed (recommended) - Pro-forma Invoice — enable if clients need a pro-forma before delivery - Online Signature — enable if clients sign off digitally on quotations
3	Sales → Configuration → Settings → Shipping	Set: - Delivery Lead Time — default number of days from order confirmation to delivery (per BPM) - Shipping Policy: 'Ship when all products are ready' OR 'Ship each product as available' — confirm from BPM - Enable 'Delivery Methods' if Greenwood charges for delivery or uses multiple carriers
4	Sales → Configuration → Settings → Invoicing	Set invoicing policy per BPM: 'Invoice what is ordered' — invoice immediately on order confirmation

#	Navigation Path — Odoo 19	What to Do & Configure
		'Invoice what is delivered' — invoice only after goods are delivered (recommended for Greenwood food supply) ⚠ This sets the default but can be changed per product

Create Pricelists

#	Navigation Path — Odoo 19	What to Do & Configure
1	Sales → Configuration → Pricelists → New	Create one pricelist per customer segment per BPM: - Standard Retail Price (base pricelist) - Hospitality Rate — may have volume discounts - Maritime Rate - Oil & Gas Contract Rate - Corporate Account Rate ⚠ Do not guess prices — use placeholder 0% until master data is loaded
2	Pricelist form → Configuration tab	For each pricelist: - Currency: GHS - Company: Greenwood Supply Services - Set Country Groups if price is country-specific - Set Availability: Always / Date range (for promotional pricing)
3	Pricelist form → Pricelist Rules tab	Add rules per pricelist: - All Products: percentage discount from sales price (e.g. Maritime: -5%) - Or per product category (e.g. Fresh Produce: -3% for hospitality) - Or per product (e.g. specific contract item: fixed price GHS 120) ⚠ Prices will be properly set once master data (products) is loaded

Customer Payment Terms

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Payment Terms → New	Create customer payment terms per BPM: 'Cash' — due immediately 'Net 7 Days' 'Net 14 Days' 'Net 30 Days' '50% Advance, 50% on Delivery' ⚠ Use the same names you created for vendors — or separate them clearly (Vendor vs Customer terms)
2	Sales → Configuration → Settings → Quotations → Default Payment Term	Set the default customer payment term (the most common one) This pre-fills on every new quotation but can be changed per customer or per order

MODULE: ACCOUNTING CONFIGURATION

Critical Module: Accounting configuration is the backbone of the entire system. Get this right first time. Every transaction in Inventory, Purchase, Sales, Payroll, Expenses, and Assets posts to Accounting. Errors here cascade everywhere.

Accounting Settings

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Settings → Fiscal Periods	Set Fiscal Year: • Lock Date: set monthly once a period is closed — prevents backdating • Tax Return Periodicity: Monthly or Quarterly per GRA requirement (Ghana) • Default Sales Tax: set to the standard Ghana VAT rate • Default Purchase Tax: set to the standard Ghana VAT rate
2	Accounting → Configuration → Settings → Currencies	Enable multi-currency if Greenwood transacts in USD/NAD: • Go to Accounting > Configuration > Currencies • Activate GHS, USD, NAD • Set update rate: manually or automatic feed • Set company currency: GHS (primary) ⚠ If Namibia is a separate company entity, set NAD as that company's currency
3	Accounting → Configuration → Settings → Customer Invoices	Set: • Default incoterm if used for international purchases • Lock period: when to automatically lock a previous accounting period • Journal Entry Sequence: auto-numbering format (e.g. INV/2026/00001)

Chart of Accounts

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Chart of Accounts	Odoo 19 auto-installs a generic chart of accounts. Review and adapt: • If Greenwood has an existing CoA from their current system, map it here • Add/rename accounts to match their existing structure • Delete or archive irrelevant template accounts ⚠ Key accounts to confirm: • 1100 – Accounts Receivable • 2100 – Accounts Payable • 1401 – Stock/Inventory Valuation • 5000 – Cost of Goods Sold • 4000 – Sales Revenue • 6000 – Salaries & Wages • 1000 – Bank (one per bank account)
2	Accounting → Configuration → Chart of Accounts → Each account	For each account, verify: • Account Type is correct (Receivable, Payable, Bank, Current Assets, etc.) • Reconciliation: enable for AR and AP accounts (required for bank reconciliation) • Currency: leave as company currency unless specifically foreign-currency account • Tags: add tax tags if this account is used in tax returns • Default Taxes: set if applicable
3	Accounting → Configuration → Chart of Accounts	Add Ghana-specific accounts if not present: • SSNIT Payable (employee + employer contributions) • PAYE Tax Payable (income tax withheld from salaries) • NHIL (National Health Insurance Levy) Payable • VAT Payable (15% Ghana VAT collected) • VAT Receivable/Input VAT (VAT paid on purchases)

#	Navigation Path — Odoo 19	What to Do & Configure
		• Withholding Tax Account

Journals

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Journals	Odoo auto-creates standard journals. Review and configure: • Customer Invoices journal (type: Sales) • Vendor Bills journal (type: Purchase) • Cash journal — for each cashier/till (type: Cash) • Bank journal — for each bank account (type: Bank) • Miscellaneous journal (type: General) • Payroll journal (type: General) — for payroll entries • Stock journal (type: General) — for inventory valuations
2	Accounting → Configuration → Journals → Each bank journal	For each bank account journal: • Name: e.g. 'GCB Bank — GHS Account' • Type: Bank • Account: 1000 Bank GCB (or appropriate bank account from CoA) • Currency: GHS (or USD/NAD for foreign accounts) • Bank Account Number: enter the actual account number • Bank: select or create the bank (GCB, Ecobank, Stanbic, etc.) • Sequence: set auto-numbering format
3	Accounting → Configuration → Journals → New Cash Journal	For each physical cash till: • Name: 'Petty Cash — Accra' • Type: Cash • Default Debit Account + Default Credit Account: 1010 Petty Cash • Currency: GHS ⚠ Create one journal per cashier if multiple cashiers need separate records

Tax Configuration — Ghana & Namibia

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Taxes → New	Create Ghana taxes: • VAT Standard Rate: 15% (Ghana standard VAT) - Name: 'VAT 15%' - Tax Type: Sales and/or Purchase - Tax Scope: Goods / Services / All - Amount: 15% - Distribution: Tax Account = VAT Payable, Tax Account (Refund) = VAT Receivable • VAT Exempt: 0% for exempt goods (basic foodstuffs if applicable) • NHIL: 2.5% if applicable to Greenwood's business
2	Accounting → Configuration → Taxes	Create Namibia taxes (if Namibia entity): • Namibia VAT: 15% (NAD) - Same structure as Ghana but assigned to Namibia entity/fiscal position • Zero-rated supplies: 0% VAT for exports • Exempt supplies: where applicable
3	Accounting → Configuration → Fiscal Positions	Create Fiscal Positions to handle tax mapping: • Ghana Domestic: maps standard products to 15% VAT • Ghana VAT Exempt (for exempt customers or products)

#	Navigation Path — Odoo 19	What to Do & Configure
	→ New	- Namibia: maps to Namibia VAT rules - Export (Zero-rated): 0% VAT for international customers Fiscal Positions auto-apply correct taxes based on customer country and category

Bank Accounts

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Accounting → Add a Bank Account	For each bank account per BPM: - Account Number: exact account number - Bank: select from list (create new bank if not listed: Bank name, BIC/SWIFT, Branch address) - Account Holder: Greenwood Supply Services - Currency: GHS / NAD / USD - Journal: linked automatically to bank journal created earlier
2	Accounting → Accounting → Bank Accounts	Configure bank synchronisation: - If Greenwood's bank supports direct feed: connect here - If manual: use CSV/OFX import for monthly statements - Set opening balance entry for each account (confirm actual balance as of go-live date with Finance team)

MODULE: DOCUMENT MANAGEMENT CONFIGURATION

#	Navigation Path — Odoo 19	What to Do & Configure
1	Documents → Configuration → Workspaces → New	Create folder/workspace structure per BPM: - HR Documents - Contracts - ID & KYC - Payslips - Leave Forms - Finance - Customer Invoices - Vendor Bills - Bank Statements - Tax Documents - Procurement - Purchase Orders - Vendor Quotations - Operations - Goods Receipt Notes - Delivery Notes - Inventory Reports - Management - Board Reports - Contracts & Agreements - Compliance Certificates
2	Documents → Configuration → Workspaces → Each workspace	Set access rights per workspace per BPM: - Default Access: who can read, write, or manage each workspace - HR Documents: HR Manager and HR Officer only — NOT visible to warehouse staff - Finance: Finance team + Management - Procurement: Procurement team + Finance - Operations: Warehouse + Operations teams - Management: Directors + Senior Management only

#	Navigation Path — Odoo 19	What to Do & Configure
3	Documents → Configuration → Tags	Create document tags for easy filtering: • Contract, Invoice, PO, GRN, Payslip, Report, Certificate, Policy, ID Document • These tags can be applied to any document across all workspaces
4	Documents → Configuration → Workspaces → Auto-classification rules	Set up auto-classification where supported: • Odoo 19 allows documents captured through integrated flows (e.g. vendor bills sent to Accounting email) to auto-file into correct workspace • Set email alias if using Odoo as email gateway for invoice processing

Today's Focus: The full HR module group. These modules are deeply interconnected — configure them in order: Employees first, then Attendance, then Time Off, then Payroll. Each depends on the previous.

Master Data Note: Today is also the deadline you gave Greenwood for returning master data templates. Follow up first thing in the morning if nothing has come back.

MODULE: EMPLOYEES CONFIGURATION

Employee Settings

#	Navigation Path — Odoo 19	What to Do & Configure
1	Employees → Configuration → Settings	Enable based on BPM: • Employee Directory: enable (allows searchable org chart) • Skills Management: enable if tracking employee skills/competencies • Work Permits: enable if tracking expats or staff with work permits • Departure Reasons: enable to track reasons when employees leave the company
2	Employees → Configuration → Settings → Payroll section	Connect payroll settings: • Work Entry Source: set to 'Attendance' if using attendance for payroll OR 'Work Schedule' if using fixed schedules • Work Entry Rounding: set rounding rules for partial hours • Payslip PDF Print: set layout/template

Departments

#	Navigation Path — Odoo 19	What to Do & Configure
1	Employees → Configuration → Departments → New	Create ALL departments per org chart in BPM: • Finance & Accounting • Human Resources • Procurement • Sales & Customer Service • Warehouse & Logistics • Operations • Management / Executive • IT (if applicable) For each: set Department Manager (can be set after employee records are created)
2	Employees → Configuration → Departments	For each department: • Set Parent Department if there is a hierarchy (e.g. 'Operations' is parent of 'Warehouse & Logistics') • Tag each department correctly — this drives org chart and reporting

Job Positions

#	Navigation Path — Odoo 19	What to Do & Configure
1	Employees → Configuration → Job Positions → New	Create all job positions from BPM employee list: • Job Position Name: exact job title (e.g. Procurement Manager, Warehouse Supervisor, Sales Executive) • Department: assign correct department • Company: Greenwood Supply Services • Expected New Employees: set to number of people in this role (informational) • Job Description: brief role description (optional but useful for onboarding)
2	Employees → Configuration → Job Positions	Verify every unique job title in the employee list has a corresponding Job Position record ⚠ Employees cannot be properly created without a valid Job Position — create all positions before importing employees

Work Locations

#	Navigation Path — Odoo 19	What to Do & Configure
1	Employees → Configuration → Work Locations → New	Create work locations: • Greenwood Ghana — Accra Head Office • Greenwood Ghana — Warehouse • Greenwood Namibia — Office • Remote (if applicable) Set Location Type: Office / Home / Other

Employee Contracts Setup

Individual contracts are created per employee and are typically set up during master data loading on Thursday. However, configure contract types and salary structures NOW so they are ready.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Payroll → Configuration → Contract Types → New (if not already present)	Create contract types per BPM: • Permanent Employee • Fixed-Term Contract • Probation (first 3/6 months) • Part-Time • Service Provider / Contractor For each: set name and any specific rules

MODULE: ATTENDANCE CONFIGURATION

Attendance Settings

#	Navigation Path — Odoo 19	What to Do & Configure
1	Attendances → Configuration → Settings	Enable based on BPM: • Manual Attendance: employees check in via the Odoo app/web interface • Hardware Attendance (IoT): enable if Greenwood uses a biometric device - If biometric: you need an IoT Box connected to Odoo - Configure IoT Box with biometric device IP address • Extra Hours (Overtime): enable if overtime tracking was confirmed in BPM

#	Navigation Path — Odoo 19	What to Do & Configure
		Overtime Validation: if enabled, HR/manager must validate overtime claims
2	Attendances → Configuration → Settings → Count Extra Hours	Configure overtime rules: - Start counting extra hours from: set per BPM (e.g. after 8 hours per day) - Overtime Rate: e.g. 1.5x for first 2 hours, 2x thereafter (confirm from BPM)

Work Schedules

#	Navigation Path — Odoo 19	What to Do & Configure
1	Employees → Configuration → Working Schedules → New	Create the standard work schedule per BPM: - Name: 'Greenwood Standard 40h' - Company: Greenwood Supply Services - Timezone: Africa/Accra - Work Time Rate: 100% - Week Type: Weekly Then add each working day: Day Start Time End Time Work From (location) Mon 08:00 17:00 Office Tue 08:00 17:00 Office ... through Friday Leave Saturday and Sunday empty (non-working)
2	Employees → Configuration → Working Schedules → New	If shift workers exist (warehouse): 'Morning Shift — 6am to 2pm' 'Afternoon Shift — 2pm to 10pm' - Create separate schedules for each shift pattern - Assign to employees on their employee record
3	Employees → Configuration → Working Schedules → Each schedule	In the schedule, verify: - Work Hours per Week total is correct (e.g. 40 hours) - Lunch break: if included in schedule or unpaid (handled as attendance deduction) - Global Time Off (public holidays): can be linked here or set separately under Time Off

MODULE: TIME OFF (LEAVE) CONFIGURATION

Activity Types (Leave Types)

#	Navigation Path — Odoo 19	What to Do & Configure
1	Time Off → Configuration → Activity Types → New	Create EVERY leave type from BPM. For each: - Name: Annual Leave - Leave Validation: set to 'By Time Off Officer' or 'By Employee's Approver' per BPM - Approval: No Validation / By Time Off Officer / Set by Time Off Officer - Request Type: allow by day / by half day / by hour - Allocation: is allocation needed? Fixed days granted or accrued? - Color: assign a color (used in calendar view) - Payslip Display: how it shows on payslip
2	Time Off → Configuration	Create ALL leave types confirmed in BPM: Annual Leave — requires allocation, approval by manager

#	Navigation Path — Odoo 19	What to Do & Configure
	→ Activity Types	• Sick Leave — no allocation needed (on-demand), may require medical cert after X days • Maternity Leave — fixed allocation (Ghana: 12 weeks / 84 days per Labour Act) • Paternity Leave — fixed allocation (typically 5 days in Ghana) • Compassionate/Bereavement Leave — set days per BPM • Study/Exam Leave — if applicable • Unpaid Leave — no pay impact (mark as unpaid) • Public Holiday — auto-assigned based on holiday calendar • Compensatory Leave — if overtime is converted to leave
3	Time Off → Configuration → Activity Types → Each type	For each leave type, set specific options: • 'Support Document Required': enable for Sick Leave (require sick note after X days) • 'Negative Balance': allow going negative for sick leave or not • 'No Limit' allocation: for sick leave (employees take when needed) • 'Carry-Over': enable for Annual Leave per BPM — set max days and expiry date

Accrual Plans

#	Navigation Path — Odoo 19	What to Do & Configure
1	Time Off → Configuration → Accrual Plans → New	For annual leave (if accrued monthly rather than granted all at start of year): • Name: 'Annual Leave Accrual Plan' • Level 1: - Accrual Rate: X days per month (e.g. 1.25 days/month = 15 days/year) - Frequency: Monthly - Start after: 0 months (or set probation period) - Maximum Accrual: cap at 30 days total balance • Create additional levels for service-based increases (e.g. after 5 years: 1.67 days/month)

Public Holidays

#	Navigation Path — Odoo 19	What to Do & Configure
1	Time Off → Configuration → Public Holidays → New (or Employees → Configuration → Public Holidays)	Create Ghana public holidays for 2026: • January 1 — New Year's Day • March 6 — Independence Day • April 3 — Good Friday (2026) • April 6 — Easter Monday (2026) • May 1 — Workers Day (Labour Day) • May 25 — Africa Day • July 1 — Republic Day • August — Founders Day (confirm exact date) • September — Kwame Nkrumah Memorial Day • December 25 — Christmas Day • December 26 — Boxing Day For Namibia entity: create Namibia public holidays separately

MODULE: PAYROLL CONFIGURATION

Odoo 19 Payroll: Odoo 19 payroll uses Salary Structure Types and Salary Structures. Each Structure Type (e.g. 'Employee') has a monthly structure. Salary Rules within that structure compute each line of the payslip automatically.

Payroll Settings

#	Navigation Path — Odoo 19	What to Do & Configure
1	Payroll → Configuration → Settings	Enable based on BPM: • Work Entry Types: for each type of attendance/leave that affects payroll • Round Each Work Day: rounding for partial days • Validate Attendances: if attendance module feeds into payroll • Payslip PDF: enable to generate PDF payslips
2	Payroll → Configuration → Settings → Accounting section	Set: • Journal: Payroll Journal (the General journal type created in Accounting) • Expense Journal: for expense reimbursements through payroll ⚠ This is how payroll posts automatically to Accounting — critical to get right

Work Entry Types

#	Navigation Path — Odoo 19	What to Do & Configure
1	Payroll → Configuration → Work Entry Types	Work Entry Types define how attendance/absence is treated in payroll. Verify these exist: • Attendance (paid work hours) • Overtime (extra hours — set as paid/unpaid per BPM) • Annual Leave (paid absence) • Sick Leave (paid absence) • Maternity Leave (paid) • Unpaid Leave (no pay) • Public Holiday (paid) • Compensatory Time Off For each: set 'Leave Type' if it corresponds to a Time Off type, set 'Time Off Type' field

Salary Structures

Salary Structures define what appears on the payslip. Odoo 19 ships with a basic structure — you must customise it for Ghana's tax rules and Greenwood's specific allowances and deductions.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Payroll → Configuration → Salary Structure Types → 'Employee' type	Review the default structure type: • Name: Employee • Country: Ghana • Default Salary Structure: 'Monthly Pay' • Wage on Payslip: Basic Pay (BASIC)
2	Payroll → Configuration → Salary Structures → 'Monthly Pay' structure	This structure contains all the salary rules (the lines of the payslip). Edit it to match Greenwood's structure from BPM: ⚠ You will add each rule one by one
3	Payroll → Configuration → Salary Rules	Create rules for ALL allowances from BPM. For each rule: • Name: Housing Allowance • Code: HOUSE (unique 4-10 char code)

#	Navigation Path — Odoo 19	What to Do & Configure
	→ New (for each allowance)	• Category: Allowances (COMP) • Condition: Always • Amount Type: Fixed / Percentage of Basic • Fixed Amount: enter the GHS amount (or set per employee contract) • Python Code (if variable): e.g. result = employee.contract_id.housing_allowance Repeat for ALL allowances: Transport, Meal, Communication, Medical, Field Allowance, etc.
4	Payroll → Configuration → Salary Rules → New (GROSS rule)	Create GROSS rule: • Name: Gross Pay • Code: GROSS • Category: Gross (GROSS) • Amount Type: Python Code • Code: result = BASIC + HOUSE + TRANSPORT + MEAL + COMM (sum of all allowances) ⚠ This rule must come AFTER all allowance rules in sequence
5	Payroll → Configuration → Salary Rules → New (SSNIT Employee)	Ghana SSNIT Deduction (Employee contribution): • Name: SSNIT — Employee • Code: SSNIT_EE • Category: Deductions (DED) • Condition: Always • Amount Type: Python Code • Code: result = -(GROSS * 0.055) • Contribution Type: set to 'Employee' social security • Account: SSNIT Payable account from CoA
6	Payroll → Configuration → Salary Rules → New (SSNIT Employer)	Ghana SSNIT Employer contribution: • Name: SSNIT — Employer • Code: SSNIT_ER • Category: Employer Contributions (not on employee payslip — but adds to cost) • Amount Type: Python Code • Code: result = -(GROSS * 0.13) • Account: SSNIT Payable (employer side)
7	Payroll → Configuration → Salary Rules → New (PAYE)	Ghana Income Tax (PAYE) — Graduated Tax: • Name: PAYE Income Tax • Code: PAYE • Category: Deductions (DED) • Amount Type: Python Code • Code: implement Ghana graduated tax bands: Monthly taxable income = GROSS - SSNIT_EE Band 1: 0–319 GHS = 0% Band 2: 320–1,140 GHS = 5% Band 3: 1,141–2,180 GHS = 10% Band 4: 2,181–5,200 GHS = 17.5% Band 5: 5,201–12,480 GHS = 25% Band 6: Above 12,480 GHS = 30% ⚠ Implement as Python function or use a pre-built Ghana payroll module • Account: PAYE Tax Payable from CoA
8	Payroll → Configuration → Salary Rules → New (Loan Deduction if applicable)	If employees have salary loans: • Name: Loan Deduction • Code: LOAN • Category: Deductions • Amount Type: Python Code

#	Navigation Path — Odoo 19	What to Do & Configure
		• Code: result = -(employee.contract_id.loan_deduction or 0) ⚠ Add a custom field 'loan_deduction' to the contract model if using this approach
9	Payroll → Configuration → Salary Rules → NET rule	Verify or update NET rule: • Name: Net Salary • Code: NET • Category: Net Salary (NET) • Amount Type: Python Code • Code: result = GROSS + SSNIT_EE + PAYE + LOAN (all deductions are already negative) ⚠ This is the final amount paid to the employee

Test the Payroll Structure

Important: After creating all salary rules, run a test payslip with dummy data BEFORE loading real employee data. This verifies the calculations are correct.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Payroll → Employees → Create test employee	Create a test employee record with a contract: • Basic Salary: GHS 3,000 • Housing: GHS 500 • Transport: GHS 200 Generate a payslip and verify: • GROSS = 3,700 • SSNIT EE = 203.50 (5.5% of 3,700) • PAYE = calculated correctly per graduated bands • NET = GROSS - SSNIT - PAYE
2	Payroll → Payslips → Compute Sheet	If figures are wrong — go back to salary rules and fix the Python code Common mistakes: • SSNIT base = GROSS not just BASIC • PAYE taxable income = GROSS minus SSNIT (not full GROSS) • Signs: deductions must be negative to reduce NET

THURSDAY WEEK

2

12 March 2026

Expenses | Appraisal | Assets | Project | Master Data Load

Two priorities today: Complete the remaining 4 module configurations AND load all master data once received from Greenwood. Master data loading is a critical milestone — it unlocks internal QA on Friday.

MODULE: EXPENSES CONFIGURATION

#	Navigation Path — Odoo 19	What to Do & Configure
1	Expenses → Configuration → Settings	Enable based on BPM: - Expense Receipts: enable 'Reimburse in Payroll' if expenses are paid through salary run OR 'Manual Reimbursement' if paid via bank transfer - Expense Categories: expenses in Odoo are product records with the 'Can be Expensed' flag - Auto-create vendor bill on expense approval (optional)
2	Expenses → Configuration → Expense Categories (or Inventory > Products)	Create expense products/categories per BPM. For each: - Name: e.g. Fuel Reimbursement, Accommodation, Meals, Client Entertainment, Training Costs, Taxi/Transport - Product Type: Service - Can be Expensed: ON - Expense Account: link to correct expense GL account from CoA (e.g. 6500 Travel Expenses) - Vendor Taxes: set if expenses include VAT - Cost: enter default/typical amount (employees can override per claim) - Re-Invoice Policy: if expenses on client projects are billable — set to 'At Cost' or 'Sales Price'
3	Expenses → Configuration → Settings → Approval	Set approval chain: - Expenses require manager approval by default - Enable 'Double Validation' if amounts above a threshold need additional approval - Set threshold for double validation if applicable ⚠ The approver is the employee's direct manager as set on their employee record
4	Accounting → Configuration → Journals → Expense Journal	Verify Expense journal exists: - Name: 'Expenses' - Type: Purchase - Default Account: link to Accounts Payable or Employee Advance account - This journal is used when expenses are posted to accounting

MODULE: APPRAISAL CONFIGURATION

#	Navigation Path — Odoo 19	What to Do & Configure
1	Appraisals → Configuration → Settings	Enable: 360° Feedback: enable if Greenwood does peer reviews - Automatic closing of appraisals: enable and set number of days - Goals: enable if tracking individual goals within appraisals - Skills: enable to include skills assessment in appraisals

#	Navigation Path — Odoo 19	What to Do & Configure
2	Appraisals → Configuration → Appraisal Templates → New	Create appraisal templates per BPM: - Feedback Template 1: 'Self Assessment' — employee fills in their own review Add questions confirmed in BPM: 'What were your key achievements?', 'What challenges did you face?', 'What support do you need?' - Feedback Template 2: 'Manager Assessment' — manager fills this in Add: 'Quality of Work', 'Initiative', 'Team Collaboration', 'Target Achievement' - Rating Scales: set to 1–5, 1–3, or custom scale per BPM
3	Appraisals → Configuration → Skills (if enabled)	Create skill categories relevant to Greenwood: - Operational Skills: Inventory Management, Order Processing, Delivery Management - Financial Skills: Accounting, Budgeting, Payroll - Soft Skills: Communication, Leadership, Problem Solving - Technical Skills: Odoo usage (set post go-live) For each skill, set proficiency levels: Beginner / Intermediate / Advanced / Expert
4	Employees → Configuration → Settings → Appraisal section	Set appraisal frequency: - How often to trigger appraisal: Monthly / Quarterly / Yearly - Delay after last appraisal: set based on BPM (e.g. Annual = 12 months) - Minimum interval between appraisals

MODULE: ASSETS CONFIGURATION

Odoo 19 Note: The Assets module in Odoo 19 sits within the Accounting module. Navigate via Accounting > Assets. Make sure the Accounting module is fully configured before setting up Assets.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Asset Models → New	Create asset models (templates) per BPM for each asset category: - Motor Vehicles - Depreciation Method: Straight Line - Useful Life: 5 years (confirm from BPM) - Account: 1600 Motor Vehicles (Fixed Asset) - Depreciation Account: 6700 Depreciation — Vehicles - Accumulated Depreciation: 1690 Acc Depreciation — Vehicles - Office Equipment (computers, printers) - Useful Life: 3 years - Method: Straight Line - Furniture & Fittings - Useful Life: 10 years - Cold Storage Equipment - Useful Life: 10–15 years - Generator / Power Equipment - Useful Life: 7 years
2	Accounting → Configuration → Asset Models → Each model	For each asset model, confirm: - Prorata Temporis: enable — prorates first and last depreciation period - Depreciation Entries: posted to the Payroll/General journal - Number of depreciations: either set number OR set duration in months (auto-calculated) - Account: Fixed Asset account (balance sheet) - Depreciation Account: Depreciation Expense (P&L) - Accumulated Depreciation Account: Contra-asset (balance sheet)

#	Navigation Path — Odoo 19	What to Do & Configure
3	Accounting → Configuration → Settings → Assets section	Verify asset settings: • Lock Posted Entries (recommended) • Set Asset Disposal account • Depreciation journal: should post to 'General' or dedicated 'Assets' journal ⚠ All asset depreciation journal entries will auto-post on their scheduled date once assets are confirmed

MODULE: PROJECT CONFIGURATION

#	Navigation Path — Odoo 19	What to Do & Configure
1	Project → Configuration → Settings	Enable based on BPM: • Timesheets: enable if tracking time against projects (very likely yes for Greenwood) • Billable Tasks: enable if any projects are billed to clients • Project Stages: enable to organise projects by status • Subtasks: enable if tasks can have sub-tasks • Task Dependencies: enable if tasks have a strict sequence • Customer Ratings: enable if collecting project satisfaction scores
2	Project → Configuration → Stages (Project stages)	Create project stages: • In Progress • On Hold • Completed • Cancelled These are the statuses a project itself can be in
3	Project → Configuration → Stages (Task stages)	Create task stages (columns in Kanban view): • Backlog / To Do • In Progress • Review / Awaiting Approval • Done These appear as columns in the task board per project
4	Project → Configuration → Settings → Timesheets	Link timesheets to payroll: • Enable: link timesheet to employee work entries (feeds payroll for timesheet-based pay) • Set Company for timesheets • Confirm with BPM whether project timesheets feed into payroll or are only for project reporting

MASTER DATA LOADING

Gate Condition: Master data is loaded from the templates Greenwood returned. If templates have NOT been returned by today, escalate to senior and PM immediately. Phase 2 cannot complete without this data.

Loading Order (Critical — Follow This Sequence)

Master data must be loaded in a specific order because of dependencies. Products need categories first. Employees need departments and positions. Bills of material need products.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Chart of Accounts	If Greenwood returned a CoA: import or manually enter all accounts • Use Accounting > Configuration > Chart of Accounts > Import (CSV format) • Or create each account manually (faster for <100 accounts) • After entry: verify all account types are correct (Receivable, Payable, etc.)

#	Navigation Path — Odoo 19	What to Do & Configure
2	Inventory → Products → Product Categories	Create product categories from master data if additional ones are needed beyond what was set up in configuration • Match exactly to what Greenwood uses in their current system
3	Inventory → Products → Products → New or Import	Create products from the Products template: For each product: • Product Name (exact as Greenwood uses) • Product Type: Storable Product (for tracked inventory items) • Internal Reference: product code • Unit of Measure: per BPM (kg, litre, carton, etc.) • Purchase UoM: if different from sales UoM • Sales Price: from master data • Cost: from master data • Category: correct product category • Taxes: Customer and Vendor taxes • Accounting: verify accounts are auto-linked from category • Tracking: By Lot (for expiry-tracked items), By Serial Number (for serialised), or None • Set Expiry Time: for perishable goods — how many days after production does it expire ⚠ For bulk import: prepare CSV with all columns and use Settings > Technical > Actions > Import Records OR the built-in Import button on the product list
4	Purchase → Orders → Vendors (via product form) or Contacts > Create	Load vendor records from Vendor Master template: • Name, Address, Country • Vendor VAT/Tax ID • Payment Terms • Bank Account (for future payment) • Currency • Product-Vendor Price links (vendor pricelist per product)
5	Sales → Orders → Customers or Contacts > Create	Load customer records from Customer Master template: • Name, Type (company/individual) • Customer Type (hospitality/maritime/oil & gas/corporate) — use Tags or Customer Rank • Address (billing and delivery if different) • Payment Terms • Pricelist: assign the correct pricelist per BPM • Credit Limit: set if managing credit exposure • Sales Rep: assign • Tax Exemption: set fiscal position if VAT exempt
6	Employees → Employees → New or Import	Load employee records from Employee Master template: For each employee: • Name, Job Position, Department • Manager (direct supervisor) • Work Location • Work Email, Mobile • Private Info tab: ID Number, Date of Birth, Gender, Address, Emergency Contact, Bank Account (for salary payment), Marital Status • HR Settings tab: Timezone, PIN (for attendance), Leave Manager • Resume tab: add past work experience or qualifications if tracked
7	Payroll → Employees → Each employee → Contracts tab → Create Contract	Create an employment contract for EVERY employee: • Contract Reference: e.g. 'EMP-GH-2024-001' • Start Date: actual employment start date • Contract Type: Permanent / Fixed-Term / Probation • Working Schedule: assign correct work schedule

#	Navigation Path — Odoo 19	What to Do & Configure
		• Work Entry Source: Working Schedule or Attendances • Salary Structure Type: Employee • Salary Structure: Monthly Pay • Wage: monthly basic salary (GHS) • Housing Allowance, Transport, Meal etc: enter each as separate fields on the contract (create these custom fields if not present, OR configure via salary rules linked to contract fields) ⚠ Employee CANNOT be added to payroll without an active confirmed contract
8	Accounting → Accounting → Assets → New	Load fixed assets from Asset Master template: For each asset: • Name: e.g. 'Toyota Hilux — GT-8822-22' • Asset Category/Model: select the asset model created earlier • Gross Value: purchase cost (GHS) • Acquisition Date: actual purchase date • First Depreciation Date: date depreciation starts • Computation Method: as set in the model • Duration: in months (or number of depreciations) • Confirm the asset — this locks it and starts the depreciation schedule ⚠ Odoo 19 auto-computes the entire depreciation schedule on confirmation — review it before confirming
9	Inventory → Operations → Physical Inventory (or via stock adjustment)	Enter opening stock quantities: • For each product at each location • Enter actual on-hand quantity as of the go-live date • Set Inventory Date to the actual count date • For products with lot tracking: enter each lot number, quantity, and expiry date separately • Confirm and validate the inventory adjustment ⚠ This creates a stock valuation entry — only do this after the CoA and product costs are set correctly
10	Accounting → Accounting → Journal Entries → New (Opening Balances)	Enter opening accounting balances: • With guidance from Greenwood's Finance Manager • Accounts Receivable: amount owed by customers as of go-live date • Accounts Payable: amount owed to vendors • Bank balances: confirmed actual balance per bank statement • Any prepayments, deposits, accruals • This is a general journal entry with all opening debit/credit balances ⚠ The opening balance entry should balance perfectly (total debits = total credits)

Data Verification Steps

- After all products loaded: spot-check 20 products for correct price, UoM, category, and tax assignment
- After customers loaded: spot-check 10 customers for correct pricelist, payment terms, and address
- After vendors loaded: check payment terms and product-vendor price links
- After employees loaded: check that every employee has a department, position, and manager assigned
- After contracts: check that every employee has one ACTIVE contract — no employee should be uncontracted
- After assets loaded: review depreciation schedule for 3-5 assets and verify amounts are correct
- After opening stock: run Inventory > Reporting > Inventory Valuation — total value should match Greenwood's stock count report

FRIDAY WEEK

2

13 March 2026

Internal QA | Print Formats | Sprint Review & Retrospective

Sprint Goal for Friday: Run end-to-end QA testing of all 13 modules. All Critical issues must be resolved by close of business today. Build demo-ready system for next week's UAT.

INTERNAL QA TESTING — ALL 13 MODULES

Run the full system through end-to-end test scenarios based on the signed BPM. Test every workflow from start to finish. Do NOT test individual buttons in isolation — test complete business flows.

Issue Classification: Critical = blocks a core business process (cannot proceed). High = significant problem with a workaround. Low = cosmetic or minor inconvenience.

QA Test Scenarios to Run

#	Navigation Path — Odoo 19	What to Do & Configure
1	Full Purchase-to-Pay Flow	Create RFQ → Send to Vendor → Receive Quotation → Confirm PO → Receive Goods (GRN) → Match Vendor Bill → Approve Payment → Post Payment ✓ Verify: PO approval workflow triggers at correct amount ✓ Verify: Stock increases on GRN confirmation ✓ Verify: Vendor bill auto-creates from GRN ✓ Verify: Journal entries correct in Accounting
2	Full Order-to-Cash Flow	Create Quotation → Send to Customer → Confirm Order → Pick & Pack Stock → Deliver → Create Invoice → Receive Customer Payment → Bank Reconciliation ✓ Verify: Stock decreases on delivery ✓ Verify: Invoice auto-creates per invoicing policy ✓ Verify: Payment posts to correct journal ✓ Verify: Customer balance clears on payment
3	Full HR Flow	Create Employee → Assign Contract → Record Attendance → Request Leave → Approve Leave → Submit Expense Claim → Approve Expense → Run Payroll → Generate Payslips → Post Payroll Journal ✓ Verify: Leave reduces employee leave balance ✓ Verify: Absence appears in payroll computation ✓ Verify: Payslip calculations match expected (GROSS, SSNIT, PAYE, NET) ✓ Verify: Payroll journal posts to correct accounts
4	Inventory Flows	Receive Stock (with lot & expiry) → Internal Transfer between warehouses → Stock Count / Adjustment → Low Stock Alert triggers Replenishment → Scrap expired goods ✓ Verify: Lot numbers and expiry dates tracked correctly ✓ Verify: FEFO strategy picks earliest expiry first ✓ Verify: Replenishment creates Purchase Order automatically ✓ Verify: Scrap posts to correct account
5	Accounting Close Test	Post journal entries → Reconcile bank statement → Generate P&L Report → Generate Balance Sheet → Check AR aging report → Check AP aging report

#	Navigation Path — Odoo 19	What to Do & Configure
		✓ Verify: All accounts balance ✓ Verify: Reports match expected structure from BPM ✓ Verify: Intercompany entries (if multi-company) are correct

Print Format Configuration

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting → Configuration → Report Layouts (or via Settings > Technical > Reports)	Configure the company letterhead/report layout: • Upload company logo • Set company header: name, address, phone, email, website, TIN • Set footer: payment details, bank account, SWIFT, terms • Choose layout style: Standard, Bold, Clean, etc.
2	Accounting → Configuration → Reports → Customer Invoice	Customise invoice print format: • Verify company header appears correctly • Invoice number, date, due date, payment terms visible • Product lines: description, quantity, unit price, discount (if applicable), tax, subtotal • Totals: subtotal, taxes, total • Payment instructions: bank details for EFT • Footer: thank you message, terms & conditions ⚠ Use Odoo Studio (if installed) or QWeb report customisation to modify layouts
3	Purchase → Configuration → Reports → Purchase Order	PO print format should include: • GW letterhead • Vendor address block • PO number and date • Delivery address • Line items: product, description, qty, UoM, unit price, total • Footer: authorised signatory line, terms
4	Inventory → Configuration → Reports → Delivery Order	Delivery Note / Waybill should include: • GW header • Customer delivery address • Delivery date • Line items: product, lot number, quantity, UoM • Driver name, vehicle, signature box • Customer receipt signature line
5	Payroll → Configuration → Reports → Payslip	Payslip format should show: • Employee name, ID, department, position • Pay period • Each earning line (Basic, all Allowances) • Each deduction line (SSNIT, PAYE, Loans) • Gross Pay, Total Deductions, Net Pay • Employer SSNIT contribution (shown separately) • Bank account for payment
6	Accounting → Accounting → Reports → Expense Report (after an expense)	Expense Report format should show: • Employee name, date submitted • List of expenses with receipts • Total amount claimed • Approver name and approval date • Reimbursement method

Sprint Review — 2:00 PM

- Demo the full system to iSERD internal team (and any Greenwood stakeholders available)

- Walk through each of the 5 QA test flows live in the system
- Show: employee record → contract → attendance → leave → payslip generated
- Show: RFQ → PO approval → GRN → vendor bill → payment
- Show: customer quotation → order → delivery → invoice → payment received
- Log all open items: issues found, items not yet configured, print formats still needing work
- Assign every open item to a team member with a deadline

Sprint Retrospective — 4:00 PM

- What went well in Week 2?
- What took longer than expected?
- What is the risk going into Week 3?
- Brief team on Week 3 plan: advanced configs Monday, UAT from Tuesday, training in parallel
- Send weekly client update email before close of business

Week 3 Goal: This week, Greenwood's users sit in front of the system. Everything must be ready, polished, and working. Monday is your last chance to complete advanced configurations before UAT begins Tuesday.

ADVANCED CONFIGURATION — AUTOMATED ACTIONS

Automated Actions in Odoo 19 trigger automatically based on events or scheduled times. These reduce manual work and ensure Greenwood's team is alerted to important events.

Navigation: Settings > Technical > Automation > Automated Actions (requires Developer Mode ON)

Inventory Automated Actions

#	Navigation Path — Odoo 19	What to Do & Configure
1	Settings → Technical → Automation → Automated Actions → New	Low Stock Alert: • Name: 'Low Stock Alert — Send Email' • Model: Product Product (or Replenishment) • Trigger: Based on time (scheduled) — run daily • Action: Send Email to Procurement Manager • Email Template: 'Products below minimum quantity: [product list]' ⚠ In Odoo 19 you can also use the built-in Replenishment Alert from Inventory > Operations > Replenishment — products below reorder point appear there automatically
2	Settings → Technical → Automation → Automated Actions → New	Expiry Date Warning: • Name: 'Expiry Warning — 30 Days' • Trigger: Scheduled — daily • Model: Stock Lot • Condition: Expiration Date is within 30 days AND quantity > 0 • Action: Send email to Warehouse Manager listing soon-to-expire lots ⚠ Confirm with BPM: what is the warning threshold — 30 days? 14 days? 7 days?

Accounting Automated Actions

#	Navigation Path — Odoo 19	What to Do & Configure
1	Settings → Technical → Automation → Automated Actions → New	Overdue Invoice Reminder: • Name: 'Overdue Invoice — Customer Reminder' • Model: Account Move (Invoice) • Trigger: Based on time condition — payment due date has passed • Action: Send email reminder to customer (use 'Payment Follow-up' feature instead — see below) ⚠ Better approach: use Accounting > Accounting > Follow-up Levels (built-in for Odoo 19)
2	Accounting → Accounting → Follow-up (Payment Follow-up module)	Configure the built-in Payment Follow-up: • Install 'Account Follow-up' module if not already installed • Go to Accounting > Configuration > Follow-up Levels • Create levels: - 7 days overdue: Email reminder (friendly) - 14 days overdue: Second reminder

#	Navigation Path — Odoo 19	What to Do & Configure
		- 30 days overdue: Formal demand letter - 60 days overdue: Flag account as overdue — add to credit hold • Assign email templates per level • Schedule: daily automatic run
3	Settings → Technical → Automation → New	Leave Balance Notification: • Name: 'Annual Leave Balance — End of Year Warning' • Model: hr.leave.allocation • Trigger: Scheduled — run in November • Action: Email employees with remaining annual leave balance and expiry date • Encourages employees to take leave before year-end

HR Automated Actions

#	Navigation Path — Odoo 19	What to Do & Configure
1	Settings → Technical → Automation → New	Contract Expiry Alert: • Name: 'Fixed-Term Contract Expiry — 30 Day Warning' • Model: hr.contract • Trigger: Based on time — 30 days before contract end date • Action: Email HR Manager with list of contracts expiring in 30 days • This ensures renewals are not missed
2	Employees → Configuration → Settings → Appraisal	Set automatic appraisal creation: • Enable automatic appraisal creation • Set frequency (Annual, Semi-Annual) • Odoo 19 will auto-create appraisal records and notify employees and managers on the set cycle

SET UP ACCESS RIGHTS & USER PROFILES

Security is critical: Every user in Odoo 19 must have ONLY the access they need to do their job. Do not give everyone 'Administrator' access. Set up profiles carefully based on each user group's role.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Settings → Users & Companies → Users → New	Create user accounts for all Greenwood staff who will use Odoo: • Name, Login Email • Language: English • Timezone: Africa/Accra • Set a temporary password (or use invitation link) Create users in role groups: • HR staff • Finance/Accounting staff • Procurement staff • Sales/Customer Service staff • Warehouse/Inventory staff • Management • System Administrator (super user — limited to 2 people max)
2	Settings → Users & Companies → Users → Each user form → Access Rights tab	Set access per module per user role: HR Officer: • Employees: HR Officer • Attendance: HR Manager • Time Off: HR Officer • Payroll: HR Manager

#	Navigation Path — Odoo 19	What to Do & Configure
		- Expenses: Approver Finance Officer: - Accounting: Accountant - Expenses: Approver - Assets: Full (via Accounting) Procurement Officer: - Purchase: User - Inventory: User Sales Officer: - Sales: User - Inventory: User (read-only) Warehouse Staff: - Inventory: Warehouse Manager or User - No access to Accounting, HR, or Payroll Management: - All modules: Read-only or Manager level (no configuration access)
3	Settings → Users → User Groups → Custom Groups (if needed)	Create custom user groups for specific access: 'Can Approve Payroll' — only payroll manager and Finance Director 'Can See Employee Salaries' — only HR Manager and Finance Director 'Can Issue Credit Notes' — only Senior Accountant and above Odoo 19 supports record rules (row-level security) and field-level access — configure if Greenwood has data segregation requirements

PREPARE UAT ENVIRONMENT

#	Navigation Path — Odoo 19	What to Do & Configure
1	Settings → Duplicate Database (or prepare staging environment)	Set up a separate UAT/staging environment if possible: - Duplicate the development database to a staging URL (e.g. greenwood-uat.odoo.com or a separate instance) - UAT is done in this environment — NOT the production configuration database ⚠ If a separate instance is not possible: use the same development environment but ensure data is reset after UAT
2	Settings → Users	Create test user accounts per role: - uat-warehouse (Warehouse role) - uat-procurement (Procurement role) - uat-sales (Sales role) - uat-finance (Finance/Accounting role) - uat-hr (HR Officer role) - uat-manager (Management role) Set temporary passwords — share with Greenwood participants
3	Create demo transactions	Seed test transactions for UAT: - Create 2 draft purchase orders - Have 5 customer orders ready to process - Have test employee records with leave balances - Have an open vendor bill - Have an open customer invoice past due - Have stock with lot numbers and expiry dates set

#	Navigation Path — Odoo 19	What to Do & Configure
		These give Greenwood's users realistic data to work with during UAT sessions
4	Prepare UAT documentation	Prepare for each UAT session: • The UAT test scripts (from Appendix of this guide) • A printed sign-off sheet per module • The UAT issue log spreadsheet — columns: Issue ID, Module, Description, Steps to Reproduce, Priority, Assigned To, Status

TUESDAY WEEK

3

17 March 2026

UAT Day 1 — Inventory | Purchase | Sales | Training Session 1

How to run a UAT session: You guide, Greenwood's users do. Place them at the keyboard. Your job is to support, not to click for them. Note every issue, question, and confusion — all of these are feedback.

UAT SESSION 1 — INVENTORY & WAREHOUSE

Invite: Warehouse Manager, Store Keeper, any staff who handle stock. Duration: 60–75 minutes.

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
Receive Stock with Expiry	1. Log in as uat-warehouse 2. Go to Inventory > Receipts 3. Open the first draft receipt 4. Click Validate after entering lot numbers and expiry dates for each product 5. Check stock on hand after	Receipt validated. Stock increases at correct location. Lot numbers and expiry dates saved correctly.	[] Pass [] Fail Issue #: _____
Internal Stock Transfer	6. Inventory > Transfers > New 7. Select Transfer Type: Internal 8. From: Main Warehouse/Stock 9. To: Cold Storage location 10. Add product line, save and validate	Stock moves from source to destination location. On-hand quantity reflects new location.	[] Pass [] Fail Issue #: _____
Stock Count / Adjustment	11. Inventory > Operations > Physical Inventory 12. Adjust quantity of one product 13. Validate the count	Stock adjustment journal entry created. On-hand quantity updated. Stock valuation updated.	[] Pass [] Fail Issue #: _____
Check Expiry Report	14. Inventory > Products > Lots / Serial Numbers 15. Filter by expiry date within 30 days	All lots expiring within 30 days visible. Product, location, quantity, and expiry date shown clearly.	[] Pass [] Fail Issue #: _____
Trigger Replenishment	16. Inventory > Operations > Replenishment 17. Check for products below reorder point 18. Confirm replenishment order	Draft Purchase Order auto-created for the replenishment quantity. Linked to correct vendor.	[] Pass [] Fail Issue #: _____

UAT SESSION 2 — PURCHASE

Invite: Procurement Manager, Procurement Officer. Duration: 60 minutes.

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
Create RFQ and Convert to PO	19. Purchase > New 20. Select Vendor 21. Add 2 product lines 22. Save as RFQ 23. Click 'Confirm Order' — if above approval threshold, check approval flow triggers	RFQ converts to PO with correct sequence number. Approval request sent if above threshold.	[] Pass [] Fail Issue #: _____
PO Approval Workflow	24. Log in as uat-manager 25. Go to Purchase > Orders 26. Find the pending approval PO 27. Approve it	PO status changes to 'Purchase Order'. Email confirmation sent to vendor. Procurement Officer can now proceed to receive goods.	[] Pass [] Fail Issue #: _____
Receive Goods (GRN)	28. On the confirmed PO 29. Click 'Receive Products' 30. Enter quantities received 31. Validate	GRN posted. Stock increases. Vendor bill button appears on PO.	[] Pass [] Fail Issue #: _____
Create and Match Vendor Bill	32. On confirmed PO 33. Click 'Create Bill' 34. Verify bill auto-populates from PO 35. Post the bill	Vendor bill created with correct amounts. Links back to PO. Awaiting payment.	[] Pass [] Fail Issue #: _____
3-Way Match Check	36. On the vendor bill 37. Smart button shows: PO matched, GRN matched	All three documents (PO, GRN, Bill) are linked and amounts reconcile.	[] Pass [] Fail Issue #: _____

UAT SESSION 3 — SALES

Invite: Sales Manager, Sales Officers, Customer Service. Duration: 60 minutes.

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
Create Quotation with Pricelist	38. Sales > New 39. Select Customer (hospitality client) 40. Note: pricelist auto-applies 41. Add products 42. Apply discount if needed 43. Send by Email	Quotation created with correct hospitality pricelist prices. Email sent to customer. Status = Quotation Sent.	[] Pass [] Fail Issue #: _____
Confirm Order and Check Stock	44. On the quotation 45. Click 'Confirm' 46. Check delivery order auto-created	Order confirmed. Delivery order created. Stock reserved for this order (visible on inventory).	[] Pass [] Fail Issue #: _____
Validate Delivery	47. Go to Inventory > Deliveries 48. Open the delivery linked to the order	Stock leaves warehouse. Delivery Note auto-generated. Customer balance updated.	[] Pass [] Fail Issue #: _____

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
	49. Set Lot numbers picked (FEFO — earliest expiry first) 50. Validate delivery		
Invoice Customer	51. On the confirmed sale order 52. Click 'Create Invoice' 53. Post invoice 54. Send invoice to customer by email	Invoice created with correct amounts, VAT applied. Sent to customer. Accounts Receivable increased.	[] Pass [] Fail Issue #: _____
Register Customer Payment	55. On posted invoice 56. Click 'Register Payment' 57. Select payment method, enter amount	Payment posted. Invoice marked as paid. Customer balance reduces. Bank/cash account credited.	[] Pass [] Fail Issue #: _____

TRAINING SESSION 1 — INVENTORY & WAREHOUSE STAFF

Training Standard: Every training session ends with a hands-on exercise where each attendee completes a full workflow unassisted. Do not move on until every person in the room can do it independently.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Inventory module → Live configured system	Walk through: Stock Receiving • How to find incoming receipts in Odoo • Entering quantities and lot numbers/expiry dates • Validating a receipt • What to do if there is a discrepancy Hands-on exercise: Each warehouse user receives a test shipment themselves
2	Inventory module → Live configured system	Walk through: Internal Transfers • How to create a transfer between locations • How to find and complete an existing transfer Hands-on exercise: transfer stock from main warehouse to cold storage
3	Inventory module → Live configured system	Walk through: Delivery Orders • How delivery orders appear (linked from sales) • How to pick, validate, and print the delivery note • How to handle partial deliveries Hands-on exercise: complete a delivery order
4	Inventory module → Reporting	Walk through: Key Reports • Stock on Hand report • Stock Movement report • Expiry Date report • How to filter and export reports Hands-on exercise: run expiry report and identify lots expiring in next 14 days
5	Training close	Distribute Quick Reference Card for warehouse module Collect attendance sign-off sheet Collect training feedback form Note any follow-up questions for the next day

End of Day — Issue Log

- Log ALL issues found during UAT sessions in the issue tracker immediately
- Classify: Critical / High / Low
- Assign each Critical and High issue to a developer with a 'fix by' time
- Brief senior on Critical issues found today
- Update sprint board

First priority today: Fix ALL Critical and High issues from Tuesday's UAT before the 10:00 AM Accounting UAT session. Greenwood's Finance team is coming in — the system must be clean.

BUG FIXING — MORNING (9:00 AM – 10:00 AM)

Immediately address all Critical and High issues logged from Tuesday. The team works in parallel — each developer takes their assigned issues.

- Critical issues: must be resolved before the next UAT session starts
- High issues: aim to resolve by today; if not possible, document workaround for the UAT session
- Low issues: add to the backlog — will be resolved before Friday
- If a Critical issue cannot be resolved in time: notify senior and PM immediately — UAT session may need to be rescheduled

UAT SESSION 4 — ACCOUNTING

Invite: Finance Manager, Chief Accountant, Accounting Officers. Duration: 75–90 minutes.

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
Post a Manual Journal Entry	58. Accounting > Accounting > Journal Entries > New 59. Select journal: General 60. Add debit and credit lines 61. Post the entry	Journal entry posted with auto-sequence number. Entries reflect in trial balance immediately.	[] Pass [] Fail Issue #: _____
Customer Invoice and Post	62. Accounting > Customers > Invoices > New 63. Create invoice for a customer 64. Add product lines 65. Post invoice	Invoice posted. Moves from Draft to Posted status. Customer account debited. VAT account credited.	[] Pass [] Fail Issue #: _____
Register Customer Payment (bank)	66. On a posted invoice 67. Click Register Payment 68. Select Bank journal 69. Enter amount and date 70. Confirm	Payment posted. Invoice shows as paid. Bank account balance increases.	[] Pass [] Fail Issue #: _____
Upload Bank Statement & Reconcile	71. Accounting > Accounting > Bank 72. Select bank account 73. Upload CSV bank statement (use a test statement) 74. Match bank lines to system transactions	Bank lines matched to posted payments and receipts. Unmatched items shown for investigation.	[] Pass [] Fail Issue #: _____
Run P&L Report	75. Accounting > Reporting > Profit and Loss 76. Set date range: MTD	P&L report shows correct revenue, cost, and	[] Pass [] Fail Issue #: _____

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
	77. Review report	expense lines per Chart of Accounts structure.	
Run Balance Sheet	78. Accounting > Reporting > Balance Sheet 79. Set date: today	Balance Sheet balances (Assets = Liabilities + Equity). All accounts present and correctly classified.	[] Pass [] Fail Issue #: _____
AP Aging Report	80. Accounting > Reporting > Aged Payable 81. Review vendor balances	All outstanding vendor bills listed with their age. Totals match total AP balance on Balance Sheet.	[] Pass [] Fail Issue #: _____
AR Aging Report	82. Accounting > Reporting > Aged Receivable 83. Review customer balances	All outstanding customer invoices listed. Totals match AR on Balance Sheet.	[] Pass [] Fail Issue #: _____

UAT SESSION 5 — HR MODULES

Invite: HR Manager, HR Officer, Payroll Administrator. Duration: 75–90 minutes.

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
Create New Employee	84. Employees > New 85. Fill in all employee details 86. Upload contract 87. Set manager and department	Employee created successfully. Appears in department org chart. Manager receives notification.	[] Pass [] Fail Issue #: _____
Leave Request and Approval	88. Log in as uat-hr (act as employee) 89. Time Off > New Leave Request 90. Select Annual Leave, enter dates 91. Submit for approval 92. Log in as manager → approve	Leave deducted from employee's leave balance. Calendar shows employee on leave. HR notified.	[] Pass [] Fail Issue #: _____
Check Attendance Records	93. Attendances > Attendances 94. View employee check-in/out records 95. Run attendance summary report	Attendance records visible per employee. Hours worked computed. Overtime shown if applicable.	[] Pass [] Fail Issue #: _____
Submit Expense Claim	96. Log in as uat-hr (act as employee) 97. Expenses > New Expense 98. Add fuel receipt: GHS 200 99. Submit to manager	Expense submitted. Manager notification received. Awaiting approval.	[] Pass [] Fail Issue #: _____
Approve and Post Expense	100. Log in as manager 101. Expenses > To Approve 102. Approve the expense	Expense approved and posted. Journal entry	[] Pass [] Fail Issue #: _____

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
	103. Post the expense report	created in accounting. Ready for reimbursement.	
Create Appraisal	104. Appraisals > New 105. Select employee 106. Set appraisal period 107. Send to employee for self-assessment	Appraisal created. Employee receives notification. Status = Confirmed.	[] Pass [] Fail Issue #: _____

TRAINING SESSION 2 — PURCHASE & SALES TEAMS

#	Navigation Path — Odoo 19	What to Do & Configure
1	Purchase module → Live configured system	Walk through for Procurement team: • How to create an RFQ from scratch • How to request approval and check approval status • How to receive goods against a PO (GRN process) • How to create a vendor bill from a PO • Key reports: Open POs, Bills to pay Hands-on exercise: complete a full PO cycle from RFQ to GRN
2	Sales module → Live configured system	Walk through for Sales team: • How to create a quotation • How to apply a pricelist and add a discount • How to confirm and track an order • How to track delivery status from the order • How to create and send a customer invoice • Key reports: Sales analysis, Invoice status Hands-on exercise: create a quotation, confirm it, generate invoice
3	Training close	Quick Reference Cards distributed for Purchase and Sales Attendance sign-off collected Feedback forms collected Follow-up questions noted

UAT SESSION 6 — PAYROLL

Invite: HR Manager, Payroll Administrator, Finance Manager (to verify journal entries). Duration: 90 minutes.

This session is critical: Payroll is the most sensitive module. PAYE, SSNIT, and net pay must be exactly right. Finance Manager must sign off on this session before it is marked as passed.

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
Confirm Employee Contracts	108. Payroll > Employees 109. Open an employee record 110. Click Contracts tab 111. Verify contract is confirmed (green)	All employees have exactly ONE confirmed active contract. No duplicates.	[] Pass [] Fail Issue #: _____
Generate Monthly Payslips	112. Payroll > Payslips > Generate Payslips 113. Set pay period: current month 114. Select all employees 115. Generate	Draft payslips created for every employee. Each shows pay period and employee name.	[] Pass [] Fail Issue #: _____
Compute and Verify Payslip	116. Open one payslip 117. Click 'Compute Sheet' 118. Review each line: 119. • BASIC = correct per contract 120. • GROSS = BASIC + all allowances 121. • SSNIT EE = 5.5% of GROSS 122. • PAYE = correct per tax bands 123. • NET = GROSS - deductions	Calculations match manual verification. SSNIT and PAYE amounts match Ghana tax tables.	[] Pass [] Fail Issue #: _____
Run Payroll for Batch	124. Payroll > Payslips 125. Select all payslips 126. Click Validate All	All payslips move from Draft to Done. Cannot be edited after this point.	[] Pass [] Fail Issue #: _____
Post Payroll Journal Entries	127. Payroll > Payslips > Action > Post Journal Entries 128. OR: the payslip batch has a 'Register Payment' option	Journal entries auto-posted to Payroll journal: Debit: Salary Expense accounts Credit: SSNIT Payable, PAYE Tax Payable, Net Salaries Payable All accounts correctly coded.	[] Pass [] Fail Issue #: _____
Check Payroll in Accounting	129. Accounting > Accounting > Journal Entries	Payroll journal entry visible. Debit totals = Credit totals. Employee	[] Pass [] Fail Issue #: _____

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
	130. Filter by Payroll journal 131. Verify entries	net salary amount matches total NET from payroll run.	

UAT SESSION 7 — ASSETS, PROJECT & DOCUMENTS

Invite: Finance Manager (Assets), Project Manager (Project), HR/Admin (Documents). Duration: 60 minutes.

Test Scenario	Test Steps (do this in Odoo 19)	Expected Result	Pass / Fail / Issue
Register a New Asset	132. Accounting > Assets > New 133. Name: Test Vehicle 134. Model: Motor Vehicles 135. Gross Value: GHS 80,000 136. Acquisition Date: today 137. Confirm	Asset confirmed. Depreciation schedule auto-generated showing monthly entries for 5 years.	[] Pass [] Fail Issue #: _____
Run Monthly Depreciation	138. On the confirmed asset 139. Click 'Depreciate' or run the scheduled depreciation 140. Verify journal entry created	Depreciation journal entry posted. Fixed asset net book value reduces. Depreciation expense increases.	[] Pass [] Fail Issue #: _____
Create a Project with Tasks	141. Project > New Project 142. Name: 'Odoo Training Rollout' 143. Add 3 tasks in kanban 144. Assign to team members 145. Log a timesheet entry on a task	Project created. Tasks visible in kanban. Timesheet entry logged. Time recorded against project.	[] Pass [] Fail Issue #: _____
Upload and Access a Document	146. Documents > HR Documents workspace 147. Upload a test PDF 148. Tag it as 'Contract' 149. Check access from a second user with limited rights	Document uploaded in correct workspace. Tagged correctly. Second user with different role can/cannot see it per access rights.	[] Pass [] Fail Issue #: _____
Document linked to an Employee	150. Employees > select an employee 151. Documents smart button 152. Upload ID document 153. Verify it appears in the HR workspace	Document linked to employee. Visible in both the employee record and the HR Documents workspace.	[] Pass [] Fail Issue #: _____

UAT RE-TEST — CRITICAL & HIGH FIXES

After Sessions 4, 5, 6, and 7 — have Greenwood re-test every Critical and High issue that was fixed since Tuesday. Do not mark any issue as RESOLVED until the client confirms it themselves.

#	Navigation Path — Odoo 19	What to Do & Configure
1	UAT Issue Log	For each fixed item:

#	Navigation Path — Odoo 19	What to Do & Configure
	→ Status: 'Fixed — Awaiting Re-test'	• Show Greenwood user the fix • Have THEM test it — not you • If they confirm: mark as Closed in issue log • If still an issue: reopen and reassign with higher priority
2	Module sign-offs	For modules where all UAT items are resolved: • Ask the Greenwood module contact to sign off on that module in writing • Module-level sign-offs can be collected throughout the week — do not wait for Friday

TRAINING SESSION 3 — FINANCE & ACCOUNTING TEAM

#	Navigation Path — Odoo 19	What to Do & Configure
1	Accounting module → Live configured system	Walk through: • Chart of Accounts navigation — what each account means • Posting a manual journal entry • Creating and posting a customer invoice • Registering customer payments • Creating and approving a vendor bill • Recording vendor payments • Uploading a bank statement and reconciling Hands-on exercise: full invoice → payment → reconciliation cycle
2	Accounting module → Reporting	Walk through: • P&L Report — how to read it, how to filter by period • Balance Sheet — key balances to monitor • Aged Receivable / Aged Payable — how to use for collections • Cash Flow statement • Tax Report — for GRA submissions Hands-on: run P&L for current month, spot a specific transaction
3	Payroll review section	Show Finance Manager: • How to review posted payroll journal entries • How to reconcile payroll with bank payment • PAYE account balance and how to clear it on tax payment • SSNIT account balance and clearing process Hands-on: review a completed payroll run and verify accounting entries
4	Training close	Quick Reference Cards for Finance Attendance sign-off Feedback forms

Finalise All Configuration Documentation

- Write up a Module Settings Guide for each of the 13 modules — what was configured, key settings, and why
- Document any custom Python code used in salary rules — with comments explaining the logic
- Document all automated actions set up — trigger, condition, action
- Document all user access rights per role — screenshots helpful
- This becomes the System Admin Guide handed over to Greenwood at Go Live

FRIDAY WEEK

3

20 March 2026

Final QA Sweep | UAT Report | Sprint Review | Gate 2 Sign-Off

Today's Mission: Close out Phase 2. Every Critical and High issue must be ZERO. Compile the formal UAT Report. Present to Greenwood. Obtain written sign-off. Phase 3 cannot begin without it.

FINAL INTERNAL QA SWEEP — ALL 13 MODULES

Before the Sprint Review, run a final internal check. Test every module end-to-end one more time. Zero tolerance for Critical issues at this point.

#	Navigation Path — Odoo 19	What to Do & Configure
1	All modules	Run the 5 core business flows from Friday Week 2's QA: • Purchase-to-Pay • Order-to-Cash • Full HR Flow (attendance → payroll) • Inventory flows • Accounting close Verify ALL previously found issues are resolved Verify all print formats are correct Verify all automated actions are active and running
2	Access Rights Check	Log in as each test user role: • uat-warehouse: confirm they CANNOT see Payroll or Accounting • uat-finance: confirm they CANNOT configure system settings • uat-manager: confirm they have read access to dashboards and reports • uat-hr: confirm they see HR but not sensitive finance data
3	Odoo 19 Dashboard Check	For Management users: • Verify the main Odoo 19 Home dashboard shows relevant app icons • Set up custom dashboards if needed (using Dashboard + Favourites on reports) • Verify any Key Performance Indicators are correctly showing

COMPILE FORMAL UAT REPORT

The UAT Report is a formal deliverable. It is a signed document that moves the project from Phase 2 to Phase 3. It must be professional, complete, and accurate.

#	Navigation Path — Odoo 19	What to Do & Configure
1	Create UAT Report document	Structure: 1. Cover Page: Project, UAT period, prepared by iSERD 2. Executive Summary: UAT conducted, dates, participants, overall outcome 3. UAT Scope: all 13 modules tested, list of sessions 4. UAT Participants: list from iSERD and Greenwood by module 5. Test Results Summary table: module # tests # passed # failed # outstanding 6. Issue Log (full): every issue raised during UAT — ID, description, module, priority, raised by, resolved by, resolution date, status 7. Outstanding Items: any Low items not yet resolved — with agreed resolution timeline

#	Navigation Path — Odoo 19	What to Do & Configure
		8. Training Completion Summary: sessions held, user groups trained, sign-off status 9. Formal Acceptance Section: 'We the undersigned confirm that UAT has been completed and the system is accepted for Go Live' 10. Sign-off block: Greenwood name, title, signature, date
2	Complete the test results table	For each module: • Count total test scenarios run • Count passed • Count failed and outstanding • Note any workarounds agreed ⚠ If ANY Critical or High issue is still OPEN: the UAT Report cannot be finalised — resolve the issue first

SPRINT REVIEW — 2:00 PM

Present the UAT status and the configured Odoo 19 system to Greenwood stakeholders and iSERD leadership.

- Show live system: walk through a complete end-to-end business day in Odoo
- Present the UAT Report — show the test results, resolved issues, outstanding items
- Demonstrate training materials created
- Confirm Go Live readiness: is the system ready? What is left?
- Show Gate 2 checklist — walk through each item

OBTAIN GATE 2 SIGN-OFF

- After incorporating any final feedback from the Sprint Review:
- Send the final UAT Report to Greenwood's project sign-off authority
- Request written confirmation: 'We confirm UAT is complete and the system is accepted for Go Live'
- This can be email or a signed document — but must be in writing
- Confirm: is all master data loaded and verified by Greenwood? This is also part of Gate 2

If sign-off is not received today: Agree latest: Monday 23 March. Without it, Go Live cannot proceed on Wednesday 25 March. Escalate immediately to senior if there is risk.

SPRINT RETROSPECTIVE — 4:00 PM

- What went well in Weeks 2 & 3?
- Any configuration surprises or BPM gaps that emerged?
- Training quality — what feedback came back from users?
- Brief team on Phase 3 & 4 plan: remaining training Mon/Tue 23-24 March, Go Live Wednesday 25 March
- Send weekly client update email before close of business

PHASE 2 — STATUS GATE 2

Before Phase 3/4 (Go Live Week) can begin, every single item below must be confirmed. Walk through this checklist with your senior before declaring Phase 2 closed.

✓	Gate 2 — Checklist Item (Must ALL be confirmed before Go Live Week)
☐	All 13 Odoo 19 modules fully configured per the signed BPM — Employees, Attendance, Time Off, Payroll, Expenses, Appraisal, Purchase, Inventory, Sales, Accounting, Assets, Project, Document
☐	Payroll: salary rules verified and tested — GROSS, SSNIT (5.5% employee, 13% employer), PAYE (graduated Ghana tax bands), NET all calculating correctly
☐	Accounting: Chart of Accounts complete, all journals configured, Ghana VAT 15% set up, bank accounts connected, fiscal positions configured
☐	Inventory: warehouses, locations, product categories, UoM, expiry tracking, FEFO strategy, reorder rules all configured
☐	All master data fully loaded and verified: Products (with lot tracking + expiry), Customers (with pricelists), Vendors (with payment terms), Employees (all records), Contracts (all active), Fixed Assets (with depreciation schedules), Opening Stock (with lot numbers), Opening Accounting Balances
☐	All access rights configured — every user has been assigned the correct role permissions, no user has more access than they need
☐	All automated actions active: low stock alerts, expiry warnings, overdue invoice follow-ups, contract expiry alerts
☐	All print formats tested and approved: Customer Invoice, Purchase Order, Delivery Note/Waybill, Payslip, Expense Report
☐	UAT Sessions completed for ALL modules: Inventory, Purchase, Sales, Accounting, Employees, Attendance, Time Off, Expenses, Payroll, Assets, Project, Documents
☐	UAT Issue Log: Critical issues = 0, High issues = 0
☐	Formal UAT Report compiled, reviewed by Greenwood, and signed off in writing
☐	Training Session 1 completed: Inventory & Warehouse staff — attendance signed
☐	Training Session 2 completed: Procurement & Sales teams — attendance signed
☐	Training Session 3 completed: Finance & Accounting team — attendance signed
☐	Configuration documentation complete: Module Settings Guide written for all 13 modules
☐	Go Live checklist prepared and reviewed with Greenwood
☐	Sprint retrospective completed and Phase 3/4 briefing done

GATE 2 CLEARED? When ALL items above are confirmed and UAT sign-off is received in writing, Phase 2 is complete. Phase 3 final sign-off and remaining training proceed Mon-Tue 23-24 March. Go Live is Wednesday 25 March 2026.
